Making Sense of Statistical Methods in Social Research Keming Yang, 2010-03-25 Making Sense of Statistical Methods in Social Research is a critical introduction to the use of statistical methods in social research It provides a unique approach to statistics that concentrates on helping social researchers think about the conceptual basis for the statistical methods they are using Whereas other statistical methods books instruct students in how to get through the statistics based elements of their chosen course with as little mathematical knowledge as possible this book aims to improve students' statistical literacy with the ultimate goal of turning them into competent researchers Making Sense of Statistical Methods in Social Research contains careful discussion of the conceptual foundation of statistical methods specifying what questions they can or cannot answer The logic of each statistical method or procedure is explained drawing on the historical development of the method existing publications that apply the method and methodological discussions Statistical techniques and procedures are presented not for the purpose of showing how to produce statistics with certain software packages but as a way of illuminating the underlying logic behind the symbols The limited statistical knowledge that students gain from straight forward how to books makes it very hard for students to move beyond introductory statistics courses to postgraduate study and research This book should help to bridge this gap

[Making Sense of Social Research](#) Malcolm Williams, 2003-02-24 What are the essentials for undergraduates and postgraduates engaged in quantitative and qualitative research How can the gap between formulating a research question and carrying out research be bridged This accessible well judged text provides students with a matchless introduction to generic research skills It is uncluttered direct and unpatronizing Key features of the book are Accessibility Clarification of key issues and problem solving guidance Demonstration of the importance of interplay between theory and research Realism in defining essential research issues and the problems that researchers encounter It is not the case that anyone can do social research most research requires training Here Malcolm Williams provides such training Helpful and often humorous Roger Sapsford University of Teesside

Making Sense of Society Alex Khasnabish, 2022-05-30T00:00:00Z Grounded in the sister disciplines of sociology and anthropology this textbook is an accessible and critical introduction to contemporary social research Alex Khasnabish eschews the common disciplinary silos in favour of an integrated approach to understanding and practising critical social research Situated in the North American context the text draws on cross cultural examples to give readers a clear sense of the diversity in human social relations It is organized thematically in a way that introduces readers to the core areas of social research and social organization and takes an unapologetically radical approach in identifying the relations of oppression and

exploitation that give rise to what most corporate textbooks euphemistically identify as social problems Focusing on key dynamics and processes at the heart of so many contemporary issues and public conversations this text highlights the ways in which critical social research can contribute to exploring understanding and forging alternatives to an increasingly bankrupt violent unstable and unjust status quo

research needs **The SAGE Handbook of Social Research Methods** Pertti Alasuutari, Leonard Bickman, Julia Brannen, 2008-02-25 The SAGE Handbook of Social Research Methods is a must for every social science researcher. It charts the new and evolving terrain of social research methodology covering qualitative, quantitative and mixed methods in one volume. The Handbook includes chapters on each phase of the research process: research design, methods of data collection and the processes of analyzing and interpreting data. The volume maintains that there is much more to research than learning skills and techniques; methodology involves the fit between theory, research questions, research design and analysis. The book also includes several chapters that describe historical and current directions in social research, debating crucial subjects such as qualitative versus quantitative paradigms, how to judge the credibility of types of research and the increasingly topical issue of research ethics. The Handbook serves as an invaluable resource for approaching research with an open mind. This volume maps the field of social research methods using an approach that will prove valuable for both students and researchers.

A Dictionary of Social Research Methodology Martyn Hammersley, 2024-09-30 This accessible book offers a detailed guide to a wide range of methodological concepts, both those of a philosophical kind and those that are more technical in character, from constructionism to critical realism, grounded theory to regression analysis, odds ratios to triangulation. It covers quantitative, qualitative and mixed methods research. There are shorter entries for relatively straightforward terms and longer entries for terms that are more complex or carry more than one meaning. The book includes basic terms such as data, empirical fact, meaning, theory and truth, as well as those that highlight major contemporary trends in the field such as arts-based research, indigenous methodologies and decolonisation. It is therefore relevant to many methodological issues and controversies taught in social science degree programmes today. Providing clear definitions for a wide range of methodological concepts from across the social sciences, this is an essential resource for all who have an interest in social research methodology.

Narrative as Topic and Method in Social Research Donileen R. Loseke, 2021-10-06 Narrative research is an increasingly popular qualitative method across the social sciences. This book has two purposes: firstly to show students and researchers how to do research on narrative topics, particularly on questions about narrative productions of meaning, and secondly to explain some fundamentals of research methods suitable for exploring these topics. A final part of the book provides empirical examples of how such research is done. These chapters use small amounts of data to examine the analytic tasks of designing research questions, finding appropriate data, sampling decisions, contextualization, data categorization and communicating study findings.
