## **Management Of Construction Projects A Constructors Perspective:**

Management of Construction Projects John E. Schaufelberger, Len Holm, 2017-03-27 Unlike the majority of construction project management textbooks out there Management of Construction Projects takes a distinctive approach by setting itself in the context of a single and real world construction project throughout and also by looking at construction project management from the constructor's perspective. This project based learning approach emphasizes the skills, knowledge and techniques students require to become successful project managers. This second edition uses a brand new larger and more challenging case study to take students through key stages of the process including contracts and subcontracting, estimating, scheduling and planning, supply chain and materials management, cost control, quality and safety, project leadership and ethics and claims disputes and project close outs. Also new to this edition is coverage of emergent industry trends such as LEAN, LEED and BIM. The book contains essential features such as review questions, exercises and chapter summaries while example plans, schedules, contracts and other documents are stored on a companion website. Written in straightforward language from a constructor's perspective, this textbook gives a realistic overview and review of the roles of project managers and everything they need to know in order to see a successful project through from start to finish.

**Management of Construction Projects** John Schaufelberger, Len Holm, 2024-03-14 Unique among construction project management textbooks Management of Construction Projects third edition takes the constructor's perspective carefully analyzing a complex real world construction case study from multiple angles to demonstrate the skills, knowledge and techniques students require to become successful project managers. Popular as an undergraduate text and as a contractor resource, the book identifies key stages of the project management process such as delivery methods and contracts, estimating, planning and scheduling, preconstruction services, subcontracting and material management, documentation, communications and payment controls, quality and safety, leadership and ethics and claims disputes and close out. This third edition includes a novel case study, a new chapter on preconstruction services, updated contract forms and figures and additional student exercises and integrates use of project management technology. Topics include building information models, sustainable construction, environmental compliance, lean construction and off site construction. Boxed examples or short case studies have been included with each chapter. These examples correspond directly to the chapters in which they are included and give the reader an applied approach to learning the concepts presented. While primarily focused on the management of commercial projects, the principles and techniques in Management of Construction Projects also apply to residential, industrial and heavy construction. Written in straightforward language from a constructor's perspective, this textbook prepares upcoming construction project managers with everything they need to see a successful project through from start to finish. **101**

**Case Studies in Construction Management** Len Holm, 2018-10-11 This book provides 101 real life construction management case studies from an author with over 40 years experience in the construction industry and as a lecturer in

management and construction engineering programmes      *Unpacking the Decent Work Agenda in Construction Operations for Developing Countries* Tirivavi Moyo, Gerrit Crafford, Fidelis Emuze, 2023-06-07 Low construction labour productivity and the inadequate welfare of construction workers are consistent challenges in developing countries. These challenges are partially due to shortcomings situated in the Decent Work Agenda. This book proposes ways of sustaining construction labour productivity through fulfilling the Decent Work Agenda. This is a unique area of focus that is essential to fulfilling the broader and global aspects of decent work sustainability and construction labour productivity. Also, the focus of this book is on contributing to the plight of construction workers whose treatment is significantly unsound. The construction industry needs to develop a humanistic face and contribute to the UN's sustainable development goal of achieving full and productive employment and decent work for all women and men. To achieve this, construction companies are encouraged to implement corporate social responsibility strategies by equipping workers of different educational levels with knowledge and skills that can be transferred to benefit themselves and their communities. Thus, establishing structured on-the-job training that incorporates sustainability learning objectives to achieve workers' safety on sites is essential. The book advocates for decency in the workplace through people-centred management, sustainability learning of skilled and semi-skilled construction workers, and decent working conditions. It will be of interest to construction industry policymakers, construction professionals, academics, and students of sustainable development and developing economies.

**Construction Cost Estimating** Len Holm, John E. Schaufelberger, 2021-04-07 *Construction Cost Estimating* equips a new generation of students and early career professionals with the skills they need to bid successfully on projects.
