

MPLS-based Layer 3 VPNs

Overall objective

The purpose of this lab is to study Layer 3 Virtual Private Networks (L3VPNs) created using MPLS and BGP. A VPN is an extension of a private network that uses a public communication infrastructure (operated by a network service provider) to interconnect a group of geographically distributed private sites. A Layer 3 VPN provides IP connectivity between VPN sites.

The most common approach uses BGP to exchange VPN routes between provider edge routers and MPLS label-switched paths for data transport. This approach, described in RFC 4364, "BGP/MPLS IP Virtual Private Network" (2005), is studied in this lab.

Prerequisites

You should be familiar with the basic concepts and operation of MPLS and LDP (Label Distribution Protocol), intra-domain and inter-domain routing using RIPv2 and BGP, as well as MPLS-based VPNs.

These topics are presented in the course material. Review them before the lab.

Case study

We consider the scenario shown in Figure 1. A network service provider (SP) operates an MPLS network and offers VPN services. The current task is to set up VPNs for the customers A and B. The network of each of these customers consists of two sites. The customers use private IP address space (partially overlapping). In this example, the routers in the SP network run RIPv2 for intra-domain routing, MPLS for packet forwarding, and LDP for label distribution. For the VPN service, the SP uses the approach based on MPLS and BGP defined in RFC 4364 (summarized in the next section). Customer edge routers exchange VPN routing information with the provider edge routers using RIPv2.

Figure 1. Network configuration for experiments with MPLS-based VPNs.

Summary of learning objectives

You will set up the network shown in Figure 1 and study the following topics:

- Configuration of MPLS, LDP and RIPv2 in the SP network.
- Configuration of MPLS-based L3VPNs using VRFs (Virtual Routing and Forwarding), MP-BGP (Multi-Protocol BGP), redistribution of VPN routes between MP-BGP and RIPv2 in VRFs, etc.
- Operation of the MPLS network and the VPNs.

During the experiments carried out in the lab, you will see how these protocols work and cooperate to achieve the VPN service, by examining the status of the routers using Cisco IOS commands and by inspecting the exchanged packets using a protocol analyzer.

Next Generation Internet Joel Mambretti, Andrew Schmidt, 1999-09-10. A guide to understanding the emerging technologies and services of the new Internet. The groundwork for the next generation Internet (NGI) is rapidly being laid and now it's only a matter of time before a truly universal, fully interactive multimedia Information Superhighway is realized. Many organizations are already connecting to powerful new Internet services. Enabling the seamless convergence of communications and computation, the next version of the Internet will be no mere upgrade; it will be based on a communications technology revolution. Written by Joel Mambretti and Andrew Schmidt, who have been intimately involved with the development of the next generation Internet, this book helps you to understand and prepare for the internetworking revolution. The authors explain why we need a next generation Internet and discuss the crucial design issues we face from the application, technical, and network services perspectives. They also explore in detail the enabling technologies behind the next generation Internet. Writing for both corporate decision makers and the technical community, they present Architecture, Services, and service management; Core protocols and technologies; Standards, governance, and ongoing partnerships; Differentiated Services; GigaPOPs; National and international pilot programs, both active and planned; International next generation Internet projects; Universal accessibility; Advanced Internet applications.

Loa Andersson, Acreo AB, IAB member and IETF MPLS working group co-chair. MPLS Enabled Applications is a must read for anyone involved in enterprise or service provider networks. Dave Cooper, Sr Manager IP Engineering, Global Crossing Ltd. The capability of Multiprotocol Label Switching (MPLS) to identify traffic based on its label at forwarding time, coupled with its ability to force traffic down pre-established paths, has created a whole range of new applications while enabling scaling of existing applications. To highlight the emerging developments, Ina Minei and Julian Lucek cover traffic engineering, L3VPNs, Layer 3 Virtual Private Networks, pseudowires, VPLS, Virtual Private LAN Service, and much more. They methodically illustrate how MPLS holds the key to network convergence by allowing operators to offer more services over a single physical infrastructure and how it can reduce the cost of the network by streamlining operations. With over a hundred illustrations and thirteen in-depth chapters, MPLS Enabled Applications documents why MPLS is now considered the networking technology for carrying all types of network traffic, including voice telephony, real time video, and the many types of data traffic. MPLS Enabled Applications provides an authoritative comprehensive overview.
