Management Accounting and Control Systems Norman B. Macintosh, Paolo Quattrone, 2010-09-21 Management accounting and control deals with administrative devices which organizations use to control their managers and employees Management accounting systems are a very important part used to motivate monitor measure and sanction the actions of managers and employees in organizations Management Accounting and Control Systems 2nd Edition is about the design and working of management accounting and control from an organizational and sociological perspective It focuses on how control systems are used to influence motivate and control what people do in organizations The second edition of the book takes into account the need for a general update of the content and a change in the structure of the original text and some of the comments received by the external reviewers *Strategizing Management Accounting* Chandana Alawattage, Danture Wickramasinghe, 2018-08-30 The theory and practice of management accounting should be seen within the context of varieties of global capitalism to appreciate its role as a calculative technology of capitalism which is practiced on factory floors corporate boards computer networks spreadsheets and so forth This new textbook is the first to introduce the field from a rounded social science perspective Strategizing Management Accounting offers a theoretical discussion on management accounting s strategic orientation by accommodating two interrelated lines of analyses from historical and contemporary perspectives The book illustrates how new management accounting has evolved into the form in which it exists today in its neoliberal context and how those new management accounting practices have become manifestos for the managers as calculative technologies of decision making performance management control corporate governance as well as

global governance and development within various forms of organizations across the globe Each chapter draws on Foucauldian analysis of biopolitics explaining how neoliberal market logic informs a set of strategies and mechanisms through which various social entities and discourses are made governable by considering them as biopolitical entities of global governance Written by two recognized accounting experts this book is vital reading for all students of management accounting and will also be a useful supplementary resource for those wanting to understand and research accounting's vital role in contemporary society **Management Scholarship and Organisational Change** Miriam Green, 2019-01-08

Change is a crucial and inescapable process for many organisations It remains a constant challenge for managers and many change management initiatives fail Burns and Stalker's seminal text on managing change The Management of Innovation has often been used as a basis for research in mainstream management journals and has been represented as an important theory in popular and long established management textbooks The issues raised in that book are still being grappled with by academics and practitioners today Miriam Green provides a critical analysis of the mainstream construction of knowledge on change management through an examination of representations of that text The main thesis of her book is that this literature though valuable does not provide a full picture Its objectivist approach ignores the role of other factors raised in the original study These factors include the effects of power politics resistance and employee influence on the outcomes of managerial change strategies and on other organisational processes with important consequences for the understanding of change initiatives by both academics and practitioners This is part of an ongoing debate in management studies and more widely in the social sciences about theoretical approaches and research methods The originality of this book lies in its in depth comparison of an entire monograph on organisations facing technological and commercial change with an equally in depth analysis of the ways this work has been represented and used as a basis for teaching and research It highlights the limitations of the exclusive use of one approach to explain the complications arising from organisational change It challenges the scientific justification offered for that approach and supports arguments for more inclusive and sustainable scholarship of greater relevance to academics managers and other organisational stakeholders *Management Accounting* Leslie G. The global financial crisis has also led to a new found appreciation of the social economic and political importance of accounting concepts generally and corporate financial reporting in particular. For instance the fundamentals of capital market theory i.e. market efficiency and measurement theory i.e. fair value have received widespread public and regulatory attention. The Politics of Expertise in International Organizations Annabelle Littoz-Monnet, 2017-02-24. This edited volume advances existing research on the production and use of expert knowledge by international bureaucracies. Given the complexity technicality and apparent apolitical character of the issues dealt with in global governance arenas evidence based policy making has imposed itself as the best way to evaluate the risks and consequences of political action in global arenas. In the absence of alternative democratic modes of legitimation international organizations have adopted this approach to policy making. By treating international bureaucracies as strategic actors this volume address novel questions why and how do international bureaucrats deploy knowledge in policy making. Where does the knowledge they use come from and how can we retrace pathways between the origins of certain ideas and their adoption by international administrations. What kind of evidence do international bureaucrats resort to and with what implications. Which types of knowledge are seen as authoritative and why. This volume makes a crucial contribution to our understanding of the way global policy agendas are shaped and propagated. It will be of great interest to scholars policy makers and practitioners in the fields of public policy international relations global governance and international organizations.
