Raman, 2009-03-05 Weeds are a major constraint to agricultural production particularly in the developing world Cost efficient  
biological control is a self sustaining way to reduce this problem and produces fewer non target effects than chemical  
methods which can cause serious damage to the environment This book covers the origin distribution and ecology of twenty  
model invasive weed species which occur in habitats from tropical to temperate to aquatic Sustainable biological control of  
each weed using one or more arthropods is discussed The aim is to provide ecological management models for use across the  
tropical world and to assist in the assessment of potential risks to native and economic plants This is a valuable resource for  
scientists and policy makers concerned with the biological control of invasive tropical plants    **Ochoco National Forest
