

Section I: Routine Maintenance and Rehabilitation

Understanding Road Cross Section

Everyone involved in gravel road maintenance must understand the correct shape of the entire area within the road's right-of-way. Figure 1 shows a typical cross section of a gravel road. If states have minimum standards or policies for low-volume roads, they must be followed.

In order to maintain a gravel road properly, operators must clearly understand the need for three basic items: a crowned driving surface, a shoulder area that slopes directly away from the edge of the driving surface, and a ditch. The shoulder area and the ditch of many gravel roads may be minimal. This is particularly true in regions with very narrow or confined right-of-ways. Regardless of the location, the basic shape of the cross section must be correct or a gravel road will not perform well, even under very low traffic.

Paved roads are usually designed and then constructed with careful consideration given to correct shape of the cross section. Once paving is finished, the

roadway keeps its shape for an indefinite period of time. Gravel roads are quite different. Unfortunately, many of them are not constructed well initially. In addition, gravel roads tend to rut more easily in wet weather. Traffic also tends to displace gravel from the surface to the shoulder area and even to the ditch during dry weather. Managers and equipment operators have the continual responsibility of keeping the roadway properly shaped. The shape of the road surface and the shoulder area is the equipment operator's responsibility and is classified as routine maintenance.

Keeping the foreslope and ditch established and shaped is often the maintenance operator's responsibility as well. Obviously, the whole idea here is to keep water drained away from the roadway. Standing water at any place within the cross section (including the ditch) is one of the major reasons for distress and failure of a gravel road. There is sometimes a need for specialized equipment to do major reshaping of the cross section, especially in very wet conditions. However, the operator of routine maintenance equipment must do everything possible to take care of

Walking Seasonal Roads Mary A. Hood,2012-05-18 Seasonal roads are defined as one lane dirt roads not maintained during the winter They function as connectors linking farmers to their fields neighbors to neighbors or two more well traveled roads to each other Some access hunting lands and recreational areas Some pass by cemeteries allowing people to visit and honor their dead They can be abandoned as people move and towns fade In every incarnation the seasonal road touches the land in a gentler way than do other roads Having traveled nearly every seasonal road in Steuben County New York Hood finds they provide the ideal vantage to contemplate the meaning of place offering intimate contact with plant and wildlife and the beauty of a rural landscape Each road reveals how our land is used how our land is protected and how environmental factors have impacted the land As a literary naturalist Hood reflects on endangered species and invasive species as well as on issues of conservation and sustainability From state forests to potato fields from development along Keuka Lake to vineyards from old family cemeteries to logging sites *Walking Seasonal Roads* is a celebration and an honoring of the rural and the regionalism of place illustrating the ways we connect to our home and to each other

roads exist within the United States providing a vital part of the nation's transportation system. An environmentally sensitive road maintenance practice is a practice that when implemented reduces the adverse effect of a road on the environment by treating the cause of the problem and is in keeping with the natural landscape. This illustrated field guide provides examples of environmentally sensitive maintenance practices which if implemented reduce erosion and sediment, maintain subsurface hydrologic connectivity, restore drainage density to more natural conditions and eliminate diversion potential. It is organized to identify visual signs and problems associated with CAUSES and SOLUTIONS for the most commonly encountered road problems: road surface, ditch, cutbank, etc. Highway inspectors, public works, construction inspectors, to include some construction and building inspectors and engineers that must meet compliance with specifications, building codes and other regulations. Additionally, City engineers, concrete masonry contractors, road maintenance specialists and workers and technicians as well as County Road Supervisors may be interested in this volume. Students pursuing degree programs for Civil Engineering or certificates of study for Industrial Maintenance Technology or Public Works training in classes such as Roadway Asset Management Essentials or Inspecting Pavement Markings or certified Public Infrastructure Inspector courses may be interested in this print field guide as a handy reference.
