Green Production Strategies for Sustainability Tsai, Sang-Bing, Liu, Bin, Li, Yongjian, 2017-11-30 When generating electronic products manufacturing enterprises are producing pollution and waste that is harmful to the environment As a result of this increasing event green production has become a valuable research topic Green Production Strategies for Sustainability is an essential reference source for the latest empirical research and relevant theoretical frameworks on creating profit through environmentally friendly operating processes Including coverage on a range of topics such as corporate social responsibility environmental performance and green supply chain this book is ideally designed for managers professionals and researchers seeking current research on green production use in sustainability *Social Responsibility and Sustainability* Walter Leal Filho, 2019-01-14 This book comprehensively describes social responsibility and sustainable

development with contributions from scientists and representatives from industry working in the field. The papers are innovative, cross-cutting, and many share practice-based experiences, some of which may be replicable elsewhere. Prepared by the Inter University Sustainable Development Research Programme (IUSDRP) and the World Sustainable Development Research and Transfer Centre (WSD RTC), it reiterates the current need to promote social responsibility. Social responsibility and sustainable development are two different concepts whose integration over the years has led to significant advances in the way enterprises see and perceive their operations. It is not only about policies or steps taken to meet legal requirements but is also about social equality and environmental accountability, also bearing in mind the links with eco-efficiency, innovation, and the health and wellbeing of workers. According to ISO 26000, social responsibility is the responsibility of an organisation for the impacts of its decisions and activities on society and the environment through transparent and ethical behaviour that contributes to sustainable development, including health and the welfare of society. It takes into account the expectations of stakeholders, is in compliance with applicable law, and consistent with international norms of behaviour. It is integrated throughout the organisation and practised in its relationships. But even though the relations between social responsibility and sustainability are strong, it is still necessary to encourage organisations to adhere to or at least follow the principles of sustainable development in their operations, giving something back to the community. As such, there is a need for a better understanding of how social responsibility is related to sustainable development and of the identification of processes, methods, and tools that may help the integration of these two important elements. There is also a real need to showcase successful examples of how to structure behaviour and institutional practice in line with the sustainability challenges we face today.
