

ELECTRIC LIFT CONTROL SYSTEM (Extra Equipment)

Move the lift lever forward to lower equipment; rearward to raise equipment.

NOTE: This electric lift system is position-responsive. The equipment moves up or down in direct proportion to the amount the lift lever is moved forward or rearward.

IMPORTANT: Turn the deck depth control knob counterclockwise as far as possible. This allows the console depth control knob to be used to set mower or center blade depth.

To set mower or center blade depth, turn depth control knob counterclockwise until tight. Lower mower or blade to desired height and turn console depth control knob clockwise until depth stop touches the lift stop mechanism.

NOTE: The detail located adjacent to console depth control knob can be used as a guide in determining operating depth.

Proper adjustment of the console depth control allows the mower or center blade to return to the same pre-set height each time it is raised and lowered. This assures uniform cutting height or blading depth.

To lock mower or center blade in raised position, raise mower or blade all the way up and turn deck depth control knob clockwise until tight. The electric lift can now be used to operate front- or rear-mounted equipment.

NOTE: Front- and rear-mounted equipment can be operated position-responsive or at a pre-set depth, depending on how the console depth control is set. The electric lift is always position-responsive from the pre-set depth to the fully raised position. Front- or rear-mounted equipment cannot be locked in the raised position with either the deck or console depth control knobs.

HYDRAULIC LIFT CONTROL SYSTEM (Extra Equipment - 210, 212 and 214 Tractors)

The hydraulic lift control system operates primarily the same as the manual lift control system. The hydraulic cylinder raises and lowers equipment instead of doing it manually with a lift lever.

Refer to manual lift control system on page 6 for the method of setting depth control knob.
