RS Means Electrical Cost Data ,2009 **Landscape complexity as determined by socioeconomic trends, climate change, and broad agricultural policies: A study on multifunctional landscapes** Cenacchi, Nicola,Petsakos, Athanasios,Robertson, Richard D.,Song, Chun,Mishra, Abhijeet,2025-07-11 Food systems face dire challenges including climate change biodiversity loss and resource overuse To ensure their long term sustainability and resilience they need urgent transformation while continuing to

support livelihoods and address rising food insecurity The design and management of multifunctional agricultural landscapes offer a pathway to address these challenges and improved understanding of landscape complexity including a diverse mix of natural and cropland covers can help advance achievement of multiple food system goals As land managers and decision makers plan for the future of our landscapes they need to recognize that powerful forces outside their control will have a strong influence on the final outcome This study explores the interplay between global drivers such as population growth economic trends climate change and landscape complexity using a modeling system linking a global agricultural economic model to a land use model Global trends are described and Kenya serves as a case study representing broader local dynamics Results indicate that the majority of agricultural landscapes globally and in Kenya are projected to experience increased complexity by 2050 primarily through cropland expansion at the expense of natural habitats However there are a few instances where an expansion in cropland may be linked to a decrease in landscape complexity Patterns also vary under alternative scenarios of agricultural development Where greater complexity is achieved through policies that further concentrate agricultural land in some areas this is mainly associated with net gains in natural habitats and a contraction of cropland Overall this preliminary research underscores the need for integrated landscape management and more comprehensive scenarios to inform sustainable land use planning aligned with global food security and environmental objectives
