Laser Ablation and its Applications Claude Phipps, 2007-01-17 Laser ablation describes the interaction of intense optical fields with matter in which atoms are selectively driven off by thermal or nonthermal mechanisms The field of laser ablation physics is advancing so rapidly that its principal results are seen only in specialized journals and conferences This will be the first book that combines the most recent results in this rapidly advancing field with authoritative treatment of laser ablation and its applications including the physics of high power laser matter interaction Many practical applications exist ranging from inertial confinement fusion to propulsion of aerostats for pollution monitoring to laser ignition of hypersonic engines to laser cleaning nanoscale contaminants in high volume computer hard drive manufacture to direct observation of the electronic or dissociative states in atoms and molecules to studying the properties of materials during 200kbar shocks developed in 200fs Laser Ablation and Desorption , 1997-12-10 This volume introduces the subject of laser ablation and desorption to scientists and engineers It covers fundamental experimental and theoretical tools models and techniques and introduces the most important applications Clearly written and organized in a straightforward manner Laser Ablation and Desorption lead the reader straight through the fundamentals of laser surface interactions Each chapter is self contained and includes references to other chapters as necessary so that readers may begin with the topic of greatest interest and follow the references to other aspects of the subject contained within the book Key Features Provides up to date information about one of the most active fields in physics today Written and edited by major figures in the field of laser ablation and desorption Represents the most comprehensive treatment of the state of the art available Laser Ablation John C. Miller, 2013-11-09 Laser Ablation provides a broad picture of the current understanding of laser ablation and its many applications from the views of key contributors to the field Discussed are in detail the electronic processes in laser ablation of semiconductors and insulators the post ionization of laser desorbed biomolecules Fourier transform mass spectroscopy the interaction of laser radiation with organic polymers laser ablation and optical surface damage laser desorption ablation with laser detection and laser ablation of superconducting thin films **Advances in Laser Produced Plasmas Research** Maricel Agop, Viorel-Puiu Paun, Stefan Andrei IRIMICIUC, 2021-01-21 The world of laser matter interaction has known great and rapid advancements in the last few years with a considerable increase in the number of both experimental and theoretical studies The classical paradigm used to describe the dynamics of laser produced plasmas has been challenged by new peculiar phenomena observed experimentally like plasma particles oscillations plume splitting and self structuring behavior during the expansion of the ejected particles The use of multiple complementary techniques has become a requirement nowadays as different aspects can be showcased by specific experimental approaches To balance these non linear effects and still remain tributary to the classical theoretical views on laser produced plasma dynamics novel theoretical models that cover the two sides of the ablation plasma differentiability and non differentiability still need to be developed

Plasma is a strongly nonlinear dynamic system with many degrees of freedom and other symmetries favorable for the development of ordered structures instabilities and transitions from ordered to chaotic states In such contexts we showcased research based on global and local symmetries complexity and invariance This special number highlighted exciting new phenomena related to laser produced plasma dynamics with the implementation of theoretical models towards understanding the complex reality of laser matter interaction

Handbook of Less-Common Nanostructures Boris I. Kharisov, Oxana Vasilievna Kharissova, Ubaldo Ortiz-Mendez, 2012-03-19 As nanotechnology has developed over the last two decades some nanostructures such as nanotubes nanowires and nanoparticles have become very popular However recent research has led to the discovery of other less common nanoforms which often serve as building blocks for more complex structures In an effort to organize the field the Handbook of Less Common Nanostructures presents an informal classification based mainly on the less common nanostructures A small nanotechnological encyclopedia this book Describes a range of little known nanostructures Offers a unifying vision of the synthesis of nanostructures and the generalization of rare nanoforms Includes downloadable resources with color versions of more than 100 nanostructures Explores the fabrication of rare nanostructures including modern physical chemical and biological synthesis techniques The Handbook of Less Common Nanostructures discusses a classification system not directly related to the dimensionality and chemical composition of nanostructure forming compounds or composite Instead it is based mainly on the less common nanostructures Possessing unusual shapes and high surface areas these structures are potentially very useful for catalytic medical electronic and many other applications

Insight On Multifractal Dynamics Of Ns-laser Produced Plasmas Stefan Andrei Irimiciuc, Maricel Agop, Ioan Merches, 2023-08-22 Fourteen years after the first proposal of a fractal theoretical model to understand the dynamics of laser

produced plasma a complete image of the model is projected on a wide range of empirical data related to laser produced plasmas The book tackles the two sides of laser produced plasmas with experimental data on a wide range of materials from metallic alloys to geological samples and the associated mathematical model is developed in the multifractal theory of motion A new perspective is explored in analyzing and interpreting the data collected by electrical or optical methods focusing especially on the charged particles dynamics and the nature of fractal fluctuations and their influence during measurements as well as to the scattering process and plasma splitting phenomena all seen through the lens of multifractal physics The book offers the best presentation of the multifractal theoretical model for the study of transient phenomena in laser produced plasmas which focus leads to a balanced development of the model showcasing both the flexibility and the unique vision of a multifractal mathematical apparatus
