Informatics Competencies for Nurses in the Future of Connected Health Judy Murphy, William Goossen, 2017-01-15 Nursing informatics has a long history of focusing on information management and nurses have a long history of describing their computer use. However, based on the technical advances and through the ongoing and consistent changes in healthcare today, we are now challenged to look to the future and help determine what nurses and patients/consumers will need going forward. This book presents the proceedings of the Post Conference to the 13th International Conference on Nursing Informatics held in Geneva, Switzerland, in June 2016. The theme of the Post Conference is Forecasting Informatics Competencies for Nurses in the Future of Connected Health. This book includes 25 chapters written as part of the Post Conference, a result of the collaboration among nursing informatics experts from research, education, and practice settings from 18 countries and from varying levels of expertise: those beginning to forge new frontiers in connected health and those who helped form the discipline. The book content will help forecast and define the informatics competencies for nurses in practice and, as such, it will also help outline the requirements for informatics training in nursing programs around the world. The content will aid in shaping the nursing practice that will exist in our future of connected health when practice and technology will be inextricably intertwined.

From Genes to Personalized Healthcare Nicolas Jacq, 2007. The main focus of this publication is on technologies, solutions, and requirements that interest the grid and the life science communities to foster the integration of grids into health. The proceedings are especially interesting for grid middleware and grid application developers, biomedical and health informatics users, and security and policy makers with a common focus on the application in the health domain. Topics in this publication are: State of the art of the grid research and use at molecule, cell, organ, individual, and population levels; and security and imaging. In security, data protection and pseudonymization are being discussed. In imaging, there's Globus MEDICUS, which federates DICOM devices through a grid architecture, and KnowARC on facilitating grid networks for the biomedical research community. Finally, there's a report on the successful use of multimodal workflows in diabetic retinopathy research.

Health and Social Sectors with an Gg#egg%: A Study of the Nordic Countries Nordic Council of Ministers, 2005-04-01. The Nordic countries have reached a stage where the national level of development in the use of IT applications has extended to a Nordic level. This is partly a result of the Collaborative Network of Nordic eHealth Competence Centres, a voluntary group for experience exchange and common activities regarding ICT in healthcare. However, this Nordic co-operation needs to be strengthened and more structured with the appropriate resources, legal foundation, skills, and capacity to further develop and exploit common solutions. This report is the result of a study carried out on request of the Nordic Council of Ministers by Ministers for Social Affairs and Health. It has been carried out by the partners of the Collaborative Network of Nordic eHealth Competence Centres: Med Com Denmark, KITH Norway, STAKES Finland, Ministry of Health Iceland, and Carelink Sweden. The report describes the use of IT in health care and social services in the Nordic countries. The purpose of the study is to enhance the opportunity for the Nordic countries to learn from each other and to co-
