Tuchin,Lihong Wang,Dmitry A. Zimnyakov,2006-10-12 *Optical Polarization in Biomedical Applications* introduces key developments in optical polarization methods for quantitative studies of tissues while presenting the theory of polarization transfer in a random medium as a basis for the quantitative description of polarized light interaction with tissues This theory uses the modified transfer equation for Stokes parameters and predicts the polarization structure of multiple scattered optical fields The backscattering polarization matrices Jones matrix and Mueller matrix important for noninvasive medical diagnostic are introduced The text also describes a number of diagnostic techniques such as CW polarization imaging and spectroscopy polarization microscopy and cytometry As a new tool for medical diagnosis optical coherent polarization tomography is analyzed The monograph also covers a range of biomedical applications among them cataract and glaucoma diagnostics glucose sensing and the detection of bacteria

Laser Propagation in Random Media Rodney George Frehlich,1982 **Ballistic and Diffuse Ultrafast Laser Pulses Propagation in Model Random Media and Biological Tissues** Feng Liu,1993 **Polarized Light and the Mueller Matrix Approach** José J. Gil,Razvigor Ossikovski,2017-07-12 An Up to Date Compendium on the Physics and Mathematics of Polarization Phenomena *Polarized Light and the Mueller Matrix Approach* thoroughly and cohesively integrates basic concepts of polarization phenomena from the dual viewpoints of the states of polarization of electromagnetic waves and the transformations of these states by the action of material media Through selected examples it also illustrates actual and potential applications in materials science biology and optics technology The book begins with the basic concepts related to two and three dimensional polarization states It next describes the nondepolarizing linear transformations of the states of polarization through the Jones and Mueller Jones approaches The authors then discuss the forms and properties of the Jones and Mueller matrices associated with different types of nondepolarizing media address the foundations of the Mueller matrix and delve more deeply into the analysis of the physical parameters associated with Mueller matrices The

authors proceed to interpret arbitrary decomposition and other interesting parallel decompositions as well as compare the powerful serial decompositions of depolarizing Mueller matrix M . They also analyze the general formalism and specific algebraic quantities and notions related to the concept of differential Mueller matrix. The book concludes with useful approaches that provide a geometric point of view on the polarization effects exhibited by different types of media. Suitable for novices and more seasoned professionals, this book covers the main aspects of polarized radiation and polarization effects of material media. It expertly combines physical and mathematical concepts with important approaches for representing media through equivalent systems composed of simple components.

Continuous-Wave Laser Action in Random Scattering Media Bin Li, 2006. Color center emissions were also studied spectroscopically because point defects tended to mask rare earth dynamics of importance in this work. Nonlinear growth of infrared emission near 820 nm was attributed to the production of color centers during pumping and a Cr³⁺ related Fano resonance feature at 675 nm was identified in Al₂O₃ for the first time.
