### Linde Hydraulic Control (LHC)

#### Digital electro-hydraulic controller

Instead of a control unit, an integrated engine unit houses the drive control technology. Instead of a hydraulic accumulator, a compact electronic controller is equipped with a very powerful electro-hydraulic system, all control functions for the drive unit and the working hydraulics (2).

#### Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive engines. To ensure efficient truck operation and service, each truck model features two working fluid capacity indicators for the truck.

#### Troubleshooting

The processor of the electronic control unit analyzes analogue and digital signals. The processor recognizes hydraulic malfunctions and system errors, and displays an error message on the display/monitor on the main dashboard. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light failure
- Non-optimal function of the internal combustion engine
- The main battery and auxiliary battery indicators and oil temperature
- The main battery (in the emergency function, the internal combustion engine switches off)
- An error code appears on display

These functions can be activated by switching off the combustion engine with the key switch. During a restart, the control unit checks whether the error is still present. If the error is no longer present, the truck resumes normal operation. If the error persists, the error code reappears on the display and one of the measures listed above is initiated.

#### Changing the controller

##### 4.1.1.1.1.1.1

Problems regarding component damage due to electro-hydraulic discharge. Irreparable damage to working elements will occur if the controller is removed.

The controller is equipped with a "float plug" which is attached to the back to avoid emptying. Communication lines pass via float plug. The upper part of the controller and the software version of the controller can be read out via the back connector.

If the controller is replaced, the permitted spare part controller must be identified and plug adapted to the cable harness. All necessary information is available on the cable harness.
