Lion Server requirements

Mac OS X Lion Server has processor, memory, disk, and network requirements.

To install Lion Server on a Mac, the Mac must have:

- A 64-bit Intel processor.
- At least 2 gigabytes (GB) of random access memory (RAM).
- At least 10 gigabytes (GB) of disk space available.
Your server needs significantly more disk space—such as a high-capacity external hard drive—if you want to allow Lion, Snow Leopard, and Leopard users to back up their Macs on the server. A server needs even more disk space if you want to back up the server using Time Machine.
- An Internet connection, if you're installing Lion Server from the Mac App Store.
An Internet connection isn't required after installation.

Desktop or server hardware is recommended.

An active connection to a secure network is recommended for server setup, but isn't required. After setup, your server must have a network connection for users to access its services.

Some podcast encoding operations require a compatible graphics card. Some features have additional system requirements or require additional purchases. For details, see the Lion Server website at www.apple.com/macosx/server/.

A Mac server can be set up and used without a display and can be located where you don't have constant physical access to it. You can use another Mac to set up and administer a Mac server remotely. For information, see [Prepare an administrator computer](#).
