Kaisler,2018-11-30 This volume describes several different models of IBM computer systems characterized by different data representations and instruction sets that strongly influenced computer system architecture in the 1950s and early 1960s They focused on a common system architecture that allowed peripherals to be used on different systems albeit with specific adapters These systems were modular which made them easy to manufacture configure and service Computing with UNIVAC they used reliable Williams Tubes for memory and later introduced magnetic core memory IBM developed its own magnetic tape drives and magnetic drums that were both faster and more reliable than UNIVAC s peripherals The first software systems that could reasonably be called operating systems enabled more efficient use of programmer time and system resources The development of programming languages notably FORTRAN and assembly language processors notably Autocoder improved the productivity of programmers In addition IBM developed one of the finest product marketing sales and servicing organizations in the world The legacy of the IBM 700 series is found in their popular successors the IBM 7000 Series which will be described in a forthcoming volume <u>Artificial Intelligence with Common Lisp</u> James L. Noyes,1992

The book provides a balanced survey of the fundamentals of artificial intelligence emphasizing the relationship between symbolic and numeric processing The text is structured around an innovative interactive combination of LISP programming and AI it uses the constructs of the programming language to help readers understand the array of artificial intelligence concepts presented After an overview of the field of artificial intelligence the text presents the fundamentals of LISP explaining the language s features in more detail than any other AI text Common Lisp is then used consistently in both programming exercises and plentiful examples of actual AI code Back cover This text is intended to provide an introduction to both AI and LISp for those having a background in computer science and mathematics Pref **Role of Maps in Sci-Tech Libraries** Ellis Mount,2020-06-04 Maps charts and related items present special problems to libraries for example a less organised bibliographic control mechanism more difficult means of acquisitions and problems of storage and preservation This book first published in 1985 deals with these problems and presents practical solutions for maps in library collections **Current Issues in Computational Linguistics: In Honour of Don Walker** Antonio Zampolli,Nicoletta Calzolari,Martha Palmer,1994-06-30 With this volume in honour of Don Walker Linguistica Computazionale con tinues the series of special issues dedicated to outstanding personalities who have made a significant contribution to the progress of our discipline and maintained a special collaborative relationship with our Institute in Pisa I take the liberty of quoting in this preface some of the initiatives Pisa and Don Walker have jointly promoted and developed during our collaboration because I think that they might serve to illustrate some outstanding features of Don s personality in particular his capacity for identifying areas of potential convergence among the different scientific communities within our field and establishing concrete forms of coop eration These initiatives also testify to his continuous and untiring work dedi cated to putting people into contact and opening up communication between them collecting and disseminating information knowledge and resources and creating shareable basic infrastructures needed for progress in our field Our collaboration began within the Linguistics in Documentation group of the FID and continued in the framework of the CCL International Committee for Computational Linguistics In 1982 this collaboration was strengthened when at CO LING in Prague I was invited by Don to join him in the organization of a series of workshops with participants of the various communities interested in the study development and use of computational lexica Expert Systems and Related Topics Marlene A. Palmer,1990-01-01 This comprehensive reference to all areas of expert systems and applications plus advanced related topics lets you spend your time reading expert systems literature rather than searching for it It gives you a source of historical perspectives and outlooks on the future of the field Whether you are a manager a developer or an end user or researcher Expert Systems and Related Topics Selected Bibliography Guide to Information Sources puts all the sources of expert systems literature at your fingertips *Computerized Symbolic Manipulation in Mechanics* Edwin Kreuzer,2014-05-04 The aim of this book is to present important software tools basic concepts methods and highly sophisticated applications of computerized symbolic

David Hu,2013-03-08 This book is written for software engineers software project leaders and software managers who would like to introduce a new advanced software technology expert systems into their product Expert system technology brings into programming a new dimension in which rule of thumb or heuristic expert knowledge is encoded in the program In contrast to conventional procedural languages e g Fortran or C expert systems employ high level programming languages Le expert system shells that enable us to capture the judgmental knowledge of experts such as geologists doctors lawyers bankers or insurance underwriters Past expert systems have been more successfully applied in the problem areas of analysis and synthesis where the boundary of lo nowledge is well defined and where experts are available and can be identified Early successful applications include diagnosis systems such as MYCIN geological systems such as PROSPECTOR or design configu ration systems such as XC ON These early expert systems were mainly applicable to scientific and engineering problems which are not theoreti cally well understood in terms of decisionmaking processes by their experts and which therefore require judgmental assessment The more recent expert systems are being applied to sophisticated synthesis problems that involve a large number of choices such as how the elements are to be compared These problems normally entailed a large search space and slower speed for the expert systems designed Examples of these systems include factory scheduling applications such as ISIS or legal reasoning applications such as TAXMAN
