Handbook of Creativity John A. Glover,Royce R. Ronning,Cecil R. Reynolds,2013-03-09 The motivation underlying our development of a handbook of creativity was different from what usually is described by editors of other such volumes Our sense that a handbook was needed sprang not from a deluge of highly erudite studies calling out for organization nor did it stem from a belief that the field had become so fully articulated that such a book was necessary to provide summation and reference Instead this handbook was conceptualized as an attempt to provide structure and organization for a field of study that from our perspective had come to be a large scale example of a degenerating research program see Brown Chapter 1 The handbook grew out of a series of discussions that spanned several years At the heart of most of our interactions was a profound unhappiness with the state of research on creativity Our consensus was that the number of good works published

on creativity each year was small and growing smaller Further we could not point to a journal text or professional organization that was providing leadership for the field in shaping a scientifically sound framework for the development of research programs in creativity At the same time we were casting about for a means of honoring a dear friend E Paul Torrance Our decision was that we might best be able to honor Paul and influence research on creativity by developing a handbook designed to challenge traditional perspectives while offering research agendas based on contemporary psychological views

Adolescents In The Internet Age, 2nd Edition Paris S. Strom, Robert D. Strom, 2014-07-01

Teaching adolescents and learning from them is the paradigm elaborated throughout this second edition of *Adolescents in the Internet Age*. The premise is based upon four assumptions:

- 1 Adolescents have unique experiences that qualify them as the most credible source on what growing up is like in the current environment
- 2 Adolescents are more competent than many adults with tools of technology that will be needed for learning in the future
- 3 Adolescents and adults can support mutual development by adopting the concept of reciprocal learning and
- 4 The common quest of adolescents to gain adult identity could be attained before employment

Expectations are the theme for every chapter. The reason expectations are so important is because they influence goals, determine priorities, and are used to evaluate progress and achievements of individuals and institutions. When teacher expectations correspond with the abilities and interests of students, achievement and satisfaction are common outcomes. In contrast, if teachers expect too little, student potential can be undermined. There is also concern if expectations that students have for themselves surpass their abilities. This occurs if teachers do not inform students about their deficits. Multitasking, doing too many things at the same time, detracts from productivity. Sharing accountability depends upon complimentary and attainable expectations that can be met by students, teachers, and parents. To support appropriate expectations, this book for secondary teachers and high school students seeking a broader understanding of their own generation is organized in four parts about aspects of learning and development:

- 1 Identity expectations introduce traditional perspectives on adolescence, changes related to sources of learning, evolving emphasis of schools, and ways to support motivation, goal setting, and formation of identity
- 2 Cognitive expectations examine mental abilities, academic standards, emergence of the Internet as a learning tool, development of media literacy, creative problem solving, and encouragement of higher order thinking skills
- 3 Social expectations explore the need for giving greater attention to social development, importance of teamwork, skills involvement with social networking, adoption of civil behavior, school safety, and values as a basis for ethical behavior and character
- 4 Health expectations center on decisions that influence physical health, well being, and lifestyle choice. Consideration is given to stress management, emotional intelligence, and risk assessment strategies for individual teenagers and the schools that they attend.
