Microprocessor Architectures Steve Heath, 2014-06-28 Why are there all these different processor architectures and what do they all mean Which processor will I use How should I choose it Given the task of selecting an architecture or design approach both engineers and managers require a knowledge of the whole system and an explanation of the design tradeoffs and their effects This is information that rarely appears in data sheets or user manuals This book fills that knowledge gap Section 1 provides a primer and history of the three basic microprocessor architectures Section 2 describes the ways in which the architectures react with the system Section 3 looks at some more commercial aspects such as semiconductor technology the design cycle and selection criteria The appendices provide benchmarking data and binary compatibility standards Since the first edition of this book was published much has happened within the industry The Power PC architecture has appeared and RISC has become a more significant challenger to CISC The book now includes new material on Power PC and a complete chapter devoted to understanding the RISC challenge The examples used in the text have been based on Motorola microprocessor families but the system considerations are also applicable to other processors For this reason comparisons to other designs have been included and an overview of other processors including the Intel 80x86 and Pentium DEC Alpha SUN Sparc and MIPS range has been given Steve Heath has been involved in the design and development of microprocessor based systems since 1982 These designs have included VMEbus systems microcontrollers IBM PCs Apple Macintoshes and both CISC and RISC based multiprocessor systems while using operating systems as varied as MS DOS UNIX Macintosh OS and real time kernels An avid user of computer systems he has written numerous articles and papers for the electronics press as well as books from Butterworth Heinemann including VMEbus A Practical Companion PowerPC A Practical Companion MAC User s Pocket Book UNIX Pocket Book Upgrading Your PC Pocket Book Upgrading Your MAC Pocket Book and Effective PC Networking *The APD Alog* , 1991 *Parallel Processing for Jet Engine Control* Haydn A. Thompson, 2012-12-06 *Parallel Processing Applications for Jet Engine Control* is a volume in the new Advances in

Industrial Control series edited by Professor M J Grimble and Dr M A Johnson of the Industrial Control Unit University of Strathclyde The book describes the mapping and load balancing of gas turbine engine and controller simulations onto arrays of transputers It compares the operating system for transputers and the Uniform System upon the Butterfly Plus computer The problem of applying formal methods to parallel asynchronous processors is addressed implementing novel fault tolerant systems to meet real time flight control requirements The book presents real time closed loop results highlighting the advantages and disadvantages of Occam and the transputer Readers will find that this book provides valuable material for researchers in both academia and the aerospace industry
