Feedlot Cattle Nutrition and Metabolism Danilo Domingues Millen, Pedro Henrique Vilela Carvalho, Rodrigo Marques, 2023-07-31 The increasing demand for high quality beef has led to the necessity of including higher levels of cereal grains and its by products into cattle diets In this context adequate nutrition of beef cattle involves knowledge of energy and nutrient requirements to define specific nutritional strategy The evolution feeding strategies to feedlot cattle depends on advances related to ruminant metabolism as well as to the ruminal microbiota Furthermore a continuous flow of knowledge development in feedlot cattle nutrition and metabolism is important as new feeds additives or even new management approaches come up very often and new scenarios will impact protein and energy metabolism the ruminal microbiota and also strategies to modulate ruminal fermentation to improve health and performance of feedlot cattle Overall the main goal of this Research Topic is to contribute with recent advances in feedlot cattle nutrition and metabolism addressing studies related to the nutrition of high performing ruminants with a special emphasis on the feed efficiency ruminal fermentation and animal performance Furthermore we are interested in different aspects of sustainability and efficiency In other words the goal is to attract studies that address such issues both from a general perspective and in relation to specific domains Hence the integration of existing and current knowledge will help refine strategies to optimize the performance of feedlot cattle

Regulatory RNAs Bibekanand Mallick, Zhumur Ghosh, 2012-02-02 Recent progress in high throughput technologies and genome wide transcriptome studies have lead to a significant scientific milestone of discovering non coding RNAs ncRNAs which spans

through a major portion of the genome These RNAs most often act as riboregulators and actively participate in the regulation of important cellular functions at the transcriptional and or post transcriptional levels rather than simply being an intermediated messenger between DNA and proteins As the appreciation for the importance of ncRNAs continues to emerge it is also increasingly clear that these play critical roles in gene regulatory processes during development and differentiation Further regulatory RNAs are useful biomarkers for diagnosis of diseases Hence these RNA regulators are essential to the development of therapeutics This book on Regulatory RNAs offers a comprehensive view on our current understanding of these regulatory RNAs viz siRNA miRNA piRNA snoRNA long non coding RNA small RNA etc It addresses both the biogenesis and mechanism of action of regulatory RNAs with a primary focus on their annotation experimental methodologies microarray next gen sequencing etc for their discovery computational tools for their prediction and above all applications of these revolutionary regulatory molecules in understanding biological systems and diseases including therapeutics This comprehensive volume is intended for readers with research or teaching interests in ncRNA biology and will provide a major information resource on current research in the fast moving fields of RNA and gene expression regulation Cutting edge and concise Regulatory RNAs Basics Methods and Applications promises to support vital research in the field of regulatory RNAs ever continuing to grow rapidly and gain increasing importance in basic and translational biology

Hydrothermal microbial ecosystems Andreas Teske, Anna-Louise Reysenbach, 2015-11-24 The papers in the Hydrothermal Vents book cover a range of microbiological research in deep and shallow hydrothermal environments from high temperature black smokers to diffuse flow habitats and episodically discharging subsurface fluids to the hydrothermal plumes Together they provide a snapshot of current research interests in a field that has evolved rapidly since the discovery of hydrothermal vents in 1977 Hydrothermally influenced microbial habitats and communities represent a

wide spectrum of geological setting chemical in situ regimes and biotic communities the classical examples of basalt hosted black smoker chimneys at active mid ocean spreading centers have been augmented by hydrothermally heated and chemically altered sediments microbiota fueled by serpentinization reactions and low temperature vents with unusual menus of electron donors Environmental gradients and niches provide habitats for unusual or unprecedented microorganisms and microbial ecosystems The discovery of novel extremophiles underscores untapped microbial diversity in hydrothermal vent microbial communities Different stages of hydrothermal activity from early onset to peak activity gradual decline and persistence of cold and fossil vent sites correspond to different colonization waves by microorganisms as well as megafauna Perhaps no other field in microbiology is so intertwined with the geological and geochemical evolution of the oceans and promises so many biochemical and physiological discoveries still to be made within the unexhausted richness of extreme microbial life
