Surface Modification to Improve Properties of Materials Miran Mozetič,2019-04-16 This book contains selected contributions on surface modification to improve the properties of solid materials The surface properties are tailored either by functionalization etching or deposition of a thin coating Functionalization is achieved by a brief treatment with non equilibrium gaseous plasma containing suitable radicals that interact chemically with the material surface and thus enable the formation of rather stable functional groups Etching is performed in order to modify the surface morphology The etching parameters are selected in such a way that a rich morphology of the surfaces is achieved spontaneously on the sub micrometer scale without using masks The combination of adequate surface morphology and functionalization of materials leads to superior surface properties which are particularly beneficial for the desired response upon incubation with biological matter Alternatively the materials are coated with a suitable thin film that is useful in various applications from food to aerospace industries

Novel Methods and Pathways in Cancer Glycobiology Research ,2023-02-23 Cancer glycobiology is a blazing hot area of cancer research with aberrant post translational glycosylations on lipids and proteins considered critical for cancer development and metastasis The NIH NCI Alliance of Glycobiologists for Cancer Research is a consortium of 10 tumor glycobiology laboratories funded to investigate how cancer associated glycans CAG impact the development and

metastasis of cancer The hope of this momentous effort is to discover CAGs for use as novel biomarkers to detect early stage cancer or its aggressive behavior or alternatively as novel molecular targets with the promise of a curative approach to cancer therapy The mission of the Alliance is to study structure and function of CAGs in cancer development and to provide clinically useful biomarkers for detecting cancer early or the potential of metastasis This charge has stimulated extensive collaborations across US and International institutions to accelerate discovery of glycan based biomarkers to the forefront of NCI s efforts to diagnose early stage cancer and provide curative anti cancer therapies The main goals of these research efforts are 1 To identify and study how cancer associated glycans functionally impact cancer growth and metastasis 2 To identify cancer associated glycans that can serve as biomarkers for the detection or progression of cancer 3 To develop cancer associated glycans as novel therapeutic targets for the treatment and cure of cancer This volume consists of 9 chapters one from each funded laboratory that reviews new methods and mechanisms highlighting glycoconjugates and their roles as cancer biomarkers and or anti cancer therapeutic targets Historical and Novel Glycobiological Biomarkers of Cancer and Disease Progression Novel Glycobiological Mechanisms Driving Cancer Progression Novel Methods for Discovering Glycobiological Biomarkers of Cancer *Protein Glycosylation - Advances in Identification, Characterization and Biological Function Elucidation using Mass Spectrometry* Ganglong Yang, Hui Zhang, Wen Yi, Shi Yan, Liwei Cao, 2022-03-14
