Go Flight Mission Control 19651992:

Go, Flight! Rick Houston, Milt Heflin, 2015-12 At first glance it looks like just another auditorium in just another government building But among the talented men and later women who worked in mission control the room located on the third floor of Building 30 at what is now Johnson Space Center would become known by many as the Cathedral These members of the space program were the brightest of their generations making split second decisions that determined the success or failure of a mission The flight controllers each supported by a staff of specialists were the most visible part of the operation running the missions talking to the heavens troubleshooting issues on board and ultimately attempting to bring everyone safely back home None of NASA's storied accomplishments would have been possible without these people Interviews with dozens of individuals who worked in the historic third floor mission control room bring the compelling stories to life Go Flight is a real world reminder of where we have been and where we could go again given the right political and social climate *The International Space Station* Robert C. Dempsey, 2017 Looks at the operations of the International Space Station from the perspective of the Houston flight control team under the leadership of NASA's flight directors who authored the book The book provides insight into the vast amount of time and energy that these teams devote to the development planning and integration of a mission before it is executed The passion and attention to detail of the flight control team members who are always ready to step up when things do not go well is a hallmark of NASA human spaceflight operations With tremendous support from the ISS program office and engineering community the flight control team has made the International Space Station and the programs before it a success **The Birth of NASA** Manfred "Dutch" von Ehrenfried, 2016-03-23 This is the story of the work of the original NASA space pioneers men and women who were suddenly organized in 1958 from the then National Advisory Committee on Aeronautics NACA into the Space Task Group A relatively small group they developed the initial mission concept plans and procedures for the U S space program Then they boldly built hardware and facilities to accomplish those missions The group existed only three years before they were transferred to the Manned Spacecraft Center in Houston Texas in 1962 but their organization left a large mark on what would follow Von Ehrenfried's personal experience with the STG at Langley uniquely positions him to describe the way the group was structured and how it reacted to the new demands of a post Sputnik era He artfully analyzes how the growing space program was managed and what techniques enabled it to develop so quickly from an operations perspective The result is a fascinating window into history amply backed up by first person documentation and interviews Gemini 5 David J. Shayler, 2023-03-07 This third book of the Gemini mission series focuses on the flight that simulated in Earth orbit the duration of an eight day Apollo mission to the Moon After the proof of concept test flights Gemini 1 2 and 3 as described in GEMINI FLIES and the success of the first American EVA as well as the four day U S mission GEMINI 4 NASA gained the confidence to gradually increase mission time spent in orbit This is the first known book to focus solely on the Gemini 5 mission and its challenges

with equipment failures and difficult living conditions The mission was targeted to double the endurance of the previous one and as such was an integral stepping stone for an even more audacious mission four months later Attempting the eight and then fourteen day durations would be an opportunity for America to gain the lead in space exploration over the Soviets This mission pioneered the duration of a flight to the Moon and back three years before Apollo 8 made that journey without a lunar landing for the first time

Shoot for the Moon James Donovan, 2019-03-12 Learn why NASA astronaut Mike Collins calls this extraordinary space race story the best book on Apollo this inspiring and intimate ode to ingenuity celebrates one of the most daring feats in human history When the alarm went off forty thousand feet above the moon's surface both astronauts looked down at the computer to see 1202 flashing on the readout Neither of them knew what it meant and time was running out On July 20 1969 Neil Armstrong and Buzz Aldrin became the first humans to walk on the moon One of the world's greatest technological achievements and a triumph of the American spirit the Apollo 11 mission was a mammoth undertaking involving more than 410 000 men and women dedicated to winning the space race against the Soviets Set amid the tensions and upheaval of the sixties and the Cold War *Shoot for the Moon* is a gripping account of the dangers the challenges and the sheer determination that defined not only Apollo 11 but also the Mercury and Gemini missions that came before it From the shock of Sputnik and the heart stopping final minutes of John Glenn's Mercury flight to the deadly whirligig of Gemini 8 the doomed Apollo 1 mission and that perilous landing on the Sea of Tranquility when the entire world held its breath while Armstrong and Aldrin battled computer alarms low fuel and other problems James Donovan tells the whole story Both sweeping and intimate *Shoot for the Moon* is a powerfully written and irresistible celebration of one of humankind's most extraordinary accomplishments Booklist starred review

Gemini 4 David J. Shayler, 2018-12-18 The flight of Gemini 4 in June 1965 was conducted barely four years after the first Americans flew in space It was a bold step by NASA to accomplish the first American spacewalk and to extend the U S flight duration record to four days This would be double the experience gained from the six Mercury missions combined This daring mission was the first to be directed from the new Mission Control at the Manned Spacecraft Center near Houston Texas It also revealed that Working outside the spacecraft would require further study Developing the techniques to rendezvous with another object in space would not be as straightforward as NASA had hoped Living in a small spacecraft for several days was a challenging but necessary step in the quest for even longer flights Despite the risks the gamble that astronauts Jim McDivitt and Ed White undertook paid off Gemini 4 gave NASA the confidence to attempt an even longer flight the next time That next mission would simulate the planned eight day duration of an Apollo lunar voyage Its story is recounted in the next title in this series *Gemini 5 Eight Days in Space or Bust*

Gemini Flies! David J. Shayler, 2018-03-26 In May 1961 President John F Kennedy committed the United States to landing a man on the moon before the end of the decade With just a handful of years to pull it off NASA authorized the Project Gemini space program which gathered vital knowledge needed to achieve the nation's goal This book introduces

the crucial three step test program employed by the Gemini system covering The short unmanned orbital flight of Gemini 1 that tested the compatibility of launch vehicle spacecraft and ground systems The unmanned suborbital flight of Gemini 2 to establish the integrity of the reentry system and protective heat shield The three orbit manned evaluation flight of Gemini 3 christened Molly Brown by her crew A mission recalled orbit by orbit using mission transcripts post flight reports and the astronauts own account of their historic journey The missions of Project Gemini was the pivotal steppingstone between Project Mercury and the Apollo Program Following the success of its first two unmanned missions and the exploits of Gus Grissom and John Young on Gemini 3 NASA gained the confidence to plan an even bolder step on its next mission as described in the next book in this series on Gemini 4

Moonbound Jonathan Fetter-Vorm,2019-06-04 On a summer night in 1969 two men climbed down a ladder onto a sea of dust at the edge of an ancient dream When Neil Armstrong and Buzz Aldrin first set foot on lunar soil the moon ceased to be a place of mystery and myth It became a destination Now on the fiftieth anniversary of that journey Moonbound tells the monumental story of the moon and the men who went there first With vibrant images and meticulous attention to detail Jonathan Fetter Vorm conjures the long history of the visionaries stargazers builders and adventurers who sent Apollo 11 on its legendary voyage From the wisdom of the Babylonians to the intrigues of the Cold War from the otherworldly discoveries of Galileo to the dark legacy of Nazi atrocities from the exhilarating trajectories of astronauts recounted in their own words to the unsung brilliance of engineers working behind the scenes Moonbound captures the grand arc of the Space Age in a graphic history of unprecedented scope and profound lyricism

Houston, We've Had a Problem Rebecca Rissman,2018 In an immersive exciting narrative nonfiction format this powerful book follows a selection of people who experienced the events surrounding the Apollo 13 disaster

The Greatest Adventure Colin Burgess,2021-08-12 The Greatest Adventure explores the past present and future of the space race The space race was perhaps the greatest technological contest of the twentieth century It was a thrilling era of innovation discovery and exploration as astronauts and cosmonauts were launched on space missions of increasing length complexity and danger The Greatest Adventure traces the events of this extraordinary period describing the initial string of Soviet achievements the first satellite in orbit the first animal man and woman in space the first spacewalk as well as the ultimate US victory in the race to land on the moon The book then takes the reader on a journey through the following decades of space exploration to the present time detailing the many successes tragedies risks and rewards of space exploration

Apollo Mission Control Manfred "Dutch" von Ehrenfried,2018-06-21 This book describes the history of this now iconic room which represents America s space program during the Gemini Apollo Skylab Apollo Soyuz and early Space Shuttle eras It is now a National Historic Landmark and is being restored to a level which represents the day the flight control teams walked out after the last lunar landing missions The book is dedicated to the estimated 3 000 men and women who supported the flights and tells the story from their perspective It describes the rooms of people supporting this control center those

rooms of engineers analysts and scientists most people never knew about Some called it a shrine and some called it a cathedral Now it will be restored to its former glory and soon thousands will be able to view the place where America flew to the moon

Shattered Dreams Colin Burgess,2019-05-01 Shattered Dreams delves into the personal stories and recollections of several men and women who were in line to fly a specific or future space mission but lost that opportunity due to personal reasons mission cancellations or even tragedies While some of the subjects are familiar names in spaceflight history the accounts of others are told here for the first time Colin Burgess features spaceflight candidates from the United States Russia Indonesia Australia and Great Britain Shattered Dreams brings to new life such episodes and upheavals in spaceflight history as the saga of the three Apollo missions that were cancelled due to budgetary constraints and never flew NASA astronaut Patricia Hilliard Robertson who died of burn injuries after her airplane crashed before she had a chance to fly into space and a female cosmonaut who might have become the first journalist to fly in space Another NASA astronaut was preparing to fly an Apollo mission before he was diagnosed with a disqualifying illness There is also the amazing story of the pilot who could have bailed out of his damaged aircraft but held off while heroically avoiding a populated area and later applied to NASA to fulfill his cherished dream of becoming an astronaut despite having lost both legs in the accident These are the incredibly human stories of competitive realists fired with an unquenchable passion Their accounts reveal in their own words and those of others close to them how their shared ambition would go awry through personal accidents illness the Challenger disaster death or other circumstances

Focus On: 100 Most Popular Drama Films Based on Actual Events Wikipedia contributors, [The Woman in the Moon](#) Richard Maurer,2023-03-14 A stunning and intimate biography of Margaret Hamilton the computer engineer who helped Apollo 11 and mankind get from the Earth to the moon First hand accounts exclusive interviews with the legendary Margaret Hamilton and detailed science populate the pages of this remarkable biography In 1969 mankind successfully left our atmosphere and landed on the moon It took countless hours of calculations training wonder and sacrifice from all of the men and women who worked hard to make that landing One of those people was Margaret Hamilton A young computer engineer Hamilton was hired to develop the completely new software used in the groundbreaking Apollo Space Program Soon she became the lead engineer one of the few women in the almost entirely male dominated profession But it wasn't always easy In *The Woman in the Moon* science writer and journalist Richard Maurer Destination Moon 2019 dives deep into the backstory of this extraordinary woman With first hand interviews and access to primary sources this striking biography perfectly captures the exciting atmosphere of the Space Race and the inspiring figure of Margaret Hamilton

A Long Voyage to the Moon Geoffrey Bowman,2021-11 Biography of Apollo 17 astronaut Ron Evans 1933 1990 *The X-15 Rocket Plane* Michelle Evans,2022-05 The story of the X 15 the pioneering research flight program in the fifties and sixties and its pilots

The Social Capital Imperative Kristin L. Cullen-Lester,Greg Pryor (Human resources consultant),2024 Social capital the resources and goodwill of network contacts

can be activated to enhance employees performance leadership effectiveness careers and overall organizational functioning Despite years of research highlighting networks role in addressing business challenges organizational solutions still overwhelmingly focus on enhancing individual knowledge and skills or changing formal organizational structures and processes Shifts in the business environment make adding a social capital lens to the historical human capital lens no longer just nice to do but an imperative Employees and organizations will benefit from carefully considering network connections and intentional efforts to foster their development and use By prioritizing intentional connections organizations can create a virtuous cycle of opportunities and prevent a vicious cycle of overwhelm This book guides practitioners in revealing novel insights using network analysis and creating impact by developing and leveraging organizational networks The opening section provides readers with a strong foundation in network science The remainder of the book includes review chapters and case studies in strategic application areas Review chapter authors provide readers with a strong scientific grounding explaining why networks are important for each application area and the likely implications of revealing developing and leveraging networks Case authors provide inspiration and opportunities to learn from their real life experiences sharing challenges faced actions taken and lessons learned from applying network science within organizations This book aims to provide clearer links between insights actions and outcomes practitioners can expect when revealing developing and leveraging organizational networks demonstrating the powerful perspective that a social capital lens adds
