Approaches to Plant Evolutionary Ecology

G.P. Cheplick,2015-06-01 Plant evolutionary ecology is a rapidly growing discipline which emphasizes that populations adapt and evolve not in isolation but in relation to other species and abiotic environmental features such as climate Although it departs from traditional evolutionary and ecological fields of study the field is connected to branches of ecology genetics botany conservation and to a number of other fields of applied science primarily through shared concepts and techniques However most books regarding evolutionary ecology focus on animals creating a substantial need for scholarly literature with an emphasis on plants Approaches to Plant Evolutionary Ecology is the first book to specifically explore the evolutionary characteristics of plants filling the aforementioned gap in the literature on evolutionary ecology Renowned plant ecologist Gregory P Cheplick summarizes and synthesizes much of the primary literature regarding evolutionary ecology providing a historical context for the study of plant populations from an evolutionary perspective The book also provides summaries of both traditional

common gardens reciprocal transplants and modern molecular genetic approaches used to address questions about plant adaptation to a diverse group of abiotic and biotic factors Cheplick provides a rigorously written introduction to the rapidly growing field of plant evolutionary ecology that will appeal to undergraduate and graduate students with an interest in ecology and evolution as well as educators who are teaching courses on related topics **Darwin's Roadmap to the**

Evolution Evolving Kevin N. Lala,Tobias Uller,Nathalie Feiner,Marcus Feldman,Scott F. Gilbert,2024-09-24 A new account of the central role developmental processes play in evolution A new scientific view of evolution is emerging one that challenges and expands our understanding of how evolution works Recent research demonstrates that organisms differ greatly in how effective they are at evolving Whether and how each organism adapts and diversifies depends critically on the mechanistic details of how that organism operates its development physiology and behavior That is because the evolutionary process itself has evolved over time and continues to evolve The scientific understanding of evolution is evolving too with groundbreaking new ways of explaining evolutionary change In this book a group of leading biologists draw on the latest findings in evolutionary genetics and evo devo as well as novel insights from studies of epigenetics symbiosis and inheritance to examine the central role that developmental processes play in evolution Written in an accessible style and illustrated with fascinating examples of natural history the book presents recent scientific discoveries that expand evolutionary biology beyond the classical view of gene transmission guided by natural selection Without undermining the central importance of natural selection and other Darwinian foundations new developmental insights indicate that all organisms possess their own characteristic sets of evolutionary mechanisms The authors argue that a consideration of developmental phenomena is needed for evolutionary biologists to generate better explanations for adaptation and biodiversity This book provides a new vision of adaptive evolution

Why Black People Die Sooner Joseph L. Graves, Jr.,2025-11-11 There is a persistent gap in life expectancy between Black people and their white counterparts in the United States It is a direct result of structural racism within American society and has nothing to do with genetic differences In past eras scientific racism sought

to shift the blame to the supposed physical inferiority of people of African descent Even today medicine labors under false beliefs derived from nineteenth century racial thinking harming patients who are not of European descent Why Black People Die Sooner is a powerful and rigorous examination of the ways racism shapes health and disease Joseph L Graves Jr demonstrates that the medical profession still fails to grasp basic facts about race tracing how deep rooted falsehoods have perpetuated the disparity between Black and white lifespans He equips readers with the tools to dispel the fallacies and errors of racialized medicine including an understanding of evolutionary biology and human biological variation Graves also debunks common misconceptions about race and health on topics such as high blood pressure sickle cell disease the microbiome infectious diseases and cancer Why Black People Die Sooner closes by offering a sweeping vision for dismantling medical racism from professional training to clinical practice through biomedical research Timely and bracing this book reveals why medicine keeps misunderstanding race and how we can make it change **Antibacterial Activity of**

Nanomaterials Ana María Díez-Pascual, 2018-09-14 This book is a printed edition of the Special Issue Antibacterial Activity of Nanomaterials that was published in Nanomaterials **Biodiversity** Edmundas Lekevičius, 2022-09-20 Species are not functionally independent From a long term perspective only ecosystem with a fully integrated nutrient cycle is alive The lack of trophic autonomy should be considered one of the key factors that ensure and maintain biodiversity The variability of abiotic conditions both in space and in time also creates a huge diversity of niches and subniches for genotypes and species In addition life maintains its essential variables biomass and productivity as stable as possible due to the diversity of structures genes macromolecules metabolic pathways genotypes species etc the structures that reach optima are multiplied and thus activated while the functioning of those which lost their optima is suppressed The facts and concepts presented in this monograph thus support the conclusions that a genotype and species diversity is supported by trophic specialisation b biodiversity helps to stabilise the functions essential variables of individuals populations and ecological communities c in evolution the emergence of biodiversity is determined by heritable variation and the advantage of specialised more effective structures over non specialised ones d biodiversity is characterised by its ability to increase itself and to organise itself into relatively consistent structures which we call production pyramids and nutrient cycles This book therefore provides an answer to the question why the diversity of life is of such and such a nature Optical Allusions Jay S Hosler, 2008 Optical Allusions is for those people seeking a painstakingly researched scientifically accurate eye themed comic book adventure Wrinkles the Wonder Brain has lost his bosses eye and now he has to search all of human imagination for it Along the way he confronts biology head on and accidentally learns more about eyes and the evolution of vision than he thought possible And as if a compelling story with disembodied talking brains shape changing proteins and giant robot eyes wasn't enough each tale is followed by a fully illustrated in depth exploration of the ideas introduced in the comic story Designed to be a hybrid college text book comic book Optical Allusions is suitable for advanced readers with an interest in evolution and real science

Racism, Not Race Joseph L. Graves, Jr., Alan H. Goodman, 2021-12-07 Winner 2024 W W Howells Prize American Anthropological Association Biological Anthropology Section. The science on race is clear. Common categories like Black, white, and Asian do not represent genetic differences among groups. But if race is a pernicious fiction according to natural science, it is all too significant in the day-to-day lives of racialized people across the globe. Inequities in health, wealth, and an array of other life outcomes cannot be explained without referring to race, but their true source is racism. What do we need to know about the pseudoscience of race in order to fight racism and fulfill human potential? In this book, two distinguished scientists tackle common misconceptions about race, human biology, and racism. Using an accessible question and answer format, Joseph L. Graves Jr. and Alan H. Goodman explain the differences between social and biological notions of race. Although there are many meaningful human genetic variations, they do not map onto socially constructed racial categories. Drawing on evidence from both natural and social science, Graves and Goodman dismantle the malignant myth of gene-based racial difference. They demonstrate that the ideology of racism created races and show why the inequalities ascribed to race are in fact caused by racism. Graves and Goodman provide persuasive and timely answers to key questions about race and racism for a moment when people of all backgrounds are striving for social justice. *Racism, Not Race* shows readers why antiracist principles are both just and backed by sound science.

Dinosaurs, Volcanoes, and Holy Writ James L. Hayward, 2020-04-29. An earnest young boy who loves nature grows up the son of a fundamentalist pastor. He goes to college, trains as a biologist, and becomes a successful university professor. In the process, he finds some of the religious beliefs that carried him through childhood and adolescence indefensible in the face of evidence from biology and geology and even from Scripture itself. What's he to do? This is the journey of a boy turned scientist who finds a path away from the idols of fundamentalism and toward a universe rich with process, intrigue, and mystery. Along the way, he discovers a faith consistent with physical reality, one open to beauty, kindness, and hope.
