Electromagnetic Modeling of Composite Metallic and Dielectric Structures Branko M. Kolundžija, A. R. Djordjević, 2002 This practical new resource provides you with a much wider choice of analytical solutions to the everyday problems you encounter in electromagnetic modeling The book enables you to use cutting edge method of moments procedures with new theories and techniques that help you optimize computer performance in numerical analysis of composite metallic and dielectric structures in the complex frequency domain **Industrial Application of Electromagnetic Computer Codes**

Yves R. Crutzen, Giorgio Molinari, Guglielmo Rubinacci, 2012-12-06 During the last decade a new generation of software tools has evolved in computational electromagnetics Both analytical methods and particularly numerical techniques have improved considerably leading to an extended range of capabilities and an increased applicability of both dedicated and general purpose computer codes It is the intention of this volume to review the state of the art in electromagnetic analysis and design and to describe the fundamentals and the advances in theoretical numerical approaches coupled with practical solutions for static and time dependent fields In this context the book illustrates the effectiveness of numerical techniques and associated computer codes in solving real electromagnetic field problems In addition it demonstrates the usefulness of modern codes for the analysis of many industrial practical cases In particular solutions of magnetostatic and

magnetodynamic problems applied to electrical machines induction heating non destructive testing fusion reactor technology and other industrial are presented and discussed The present volume reflects and combines the lectures which are organized in the frame of the Eurocourse programme at JRC Ispra under the sponsorship of the Institute for Systems Engineering and Informatics ISEI It is hoped that in this context the Institute and particularly the Systems Engineering Reliability SER Division can play a stimulating role in sponsoring and promoting the diffusion of knowledge in novel areas of computer and information science

Analysis of Metallic Antennas and Scatterers Branko D. Popović, B. M. Kolundžija, 1994 Describes a novel general entire domain method for the analysis of metallic antennas and scatterers that enables a very wide range of problems to be solved using computers of relatively modest capability The conventional approximation approach requires a large amount of computer storage Of interest to engineers scientists and graduate students engaged in the analysis or design of electrically small and medium sized antennas and scatterers Distributed by INSPEC Annotation copyright by Book News Inc Portland OR

The Publishers' Trade List Annual, 1980 **Generalized Moment Methods in Electromagnetics** Johnson J. H.
