

offers sufficient grip to avoid any risk of the machine slipping during the procedure. Make sure the ramps are firmly secured in position.

NB: This method requires the machine to be in operation (see Chap. 4.4, page 36), therefore, to avoid all risk of incorrect operation, select low travel speed.

NB: The slope of the ramp is nearly always greater than the maximum authorised working tilt (5°). Therefore, the boom and arms must be lowered or travel will be impossible.

In this case, the buzzer sounds but travel movement is possible.

If the slope is greater than the maximum authorised tilt during travel, use a winch to add traction (see Chap. 2.4, page 13).

4.2.3 - Loading

The same precautions must be taken as for unloading.

The machine must be secured as shown in the diagram below.

Select high speed to mount lorry ramps.

4.2.4 - Moving the machine

Closely follow traffic rules or instructions for the area in which the machine is to be moved:

- If moving over rough terrain, inspect the route carefully before beginning overhead work.
- When moving the machine, always keep a sufficient distance away from unstable areas or banks.
- Ensure that nobody is standing too close to the machine before carrying out any movement of the whole machine or the elevating parts.
