Color Medical Image Analysis M. Emre Celebi,Gerald Schaefer,2012-09-16 Since the early 20th century medical imaging has been dominated by monochrome imaging modalities such as x ray computed tomography ultrasound and magnetic resonance imaging As a result color information has been overlooked in medical image analysis applications Recently various medical imaging modalities that involve color information have been introduced These include cervicography dermoscopy fundus photography gastrointestinal endoscopy microscopy and wound photography However in comparison to monochrome images the analysis of color images is a relatively unexplored area The multivariate nature of color image data presents new challenges for researchers and practitioners as the numerous methods developed for monochrome images are often not directly applicable to multichannel images The goal of this volume is to summarize the state of the art in the utilization of color information in medical image analysis
