Chapter 5: National Income Accounting Solutions Manual

Learning Objectives for Chapter 5

After reading this chapter, you should know

LO 05-01. What GDP measures—and what it doesn't.

LO 05-02. The difference between real and nominal GDP.

LO 05-03. Why aggregate income equals aggregate output.

LO 05-04. The major submeasures of output and income.

Questions for Discussion

1. The manuscript for this book was typed for free by a friend. Had I hired a secretary to do the same job, GDP would have been higher, even though the amount of output would have been identical. Why is this? Does this make sense? (LO 05-01)

Answer: One factor governing our choice of activities to include in the GDP is the ease with which they can be measured. It is easier to measure the services of a paid typist (the paycheck does that) than the services of a friend for whom there is no paycheck. This makes sense because it would become an insurmountable task to include all production activities provided by members of the same family or the same firm.

Expectations in Macroeconomic Models P. Fisher,2013-04-17 It is commonly believed that macroeconomic models are not useful for policy analysis because they do not take proper account of agents expectations Over the last decade mainstream macroeconomic models in the UK and elsewhere have taken on board the Rational Expectations Revolution by explicitly incorporating expectations of the future In principle one can perform the same technical exercises on a forward expectations model as on a conventional model and more Rational Expectations in Macroeconomic Models deals with the numerical methods necessary to carry out policy analysis and forecasting with these models These methods are often passed on by word of mouth or confined to obscure journals Rational Expectations in Macroeconomic Models brings them together with applications which are interesting in their own right There is no comparable textbook in the literature The specific

subjects include i solving for model consistent expectations ii the choice of terminal condition and time horizon iii experimental design i e the effect of temporary vs permanent anticipated vs unanticipated shocks deterministic vs stochastic dynamic vs static simulation iv the role of exchange rate v optimal control and inflation output tradeoffs The models used are those of the Liverpool Research Group in Macroeconomics the London Business School and the National Institute of Economic and Social Research Journal of Economic Literature ,1995 **Journal of Economic Theory** Pennsylvania,1988
