

MAINTENANCE

Removing the Carburetor

Illust. 43
Removing the carburetor.

When operating the tractor in temperatures of $+32^{\circ}\text{F.}$ or lower, observe the following precautions:

Fuel System

Use only a high-test winter-grade gasoline for starting, and keep your supply in a closed container so the more volatile portion does not evaporate. Fill the fuel tank at the end of the day's run to prevent moisture from collecting in the tank.

Lubrication

Be sure to use lubricant of the proper viscosity in the engine crankcase and air cleaner as specified on pages 31 and 32.

Storage Battery

In order to assure starting in cold weather, the battery must be kept fully charged at all times.

Cooling System

When the temperature is likely to be $+32^{\circ}\text{F.}$ or lower, there is danger of the water freezing in the cooling system. To prevent this, drain the water from the cooling system at the end of each run or use one of the recommended antifreeze solutions.

Draining and Refilling the System

1. Remove the radiator drain pipe cap and the drain plug on the lower left side of the engine. See Illust. 45.

2. See that the drain hole is not clogged and that

1. Shut off the fuel supply at the fuel tank.
2. Drain the carburetor by removing the drain plug when operating on gasoline, or by opening the drain cock when operating on distillate or kerosene. After the carburetor has drained completely, close the drain cock or replace the drain plug.
3. Disconnect the choke and governor controls.
4. Disconnect the fuel line.
5. Remove the air cleaner connections to the carburetor.
6. Remove the complete carburetor by removing the stud nuts which fasten it to the manifold.

Installing the Carburetor

1. Install the carburetor on the engine in the reverse order of removal.
2. Turn on the gasoline supply.
3. Adjust the carburetor as described previously.

the water drains completely. Then replace the pipe cap and drain plug.

Important! In freezing weather, use the following procedure when filling the cooling system:

Have sufficient water available at the tractor to fill the cooling system (warm water is desirable). Close the radiator shutter (if the tractor is so equipped) or cover the entire radiator and start the engine; then fill it with water immediately. This prevents the water from freezing during the warming-up period. For engines using distillate or kerosene, adjust the radiator shutter to maintain the operating temperature of the engine in the center of the "RUN" range on the heat indicator (Illust. 7), or on the low side of the "RUN" range for gasoline fuel.

Antifreeze Solutions

The following table shows the quantity of antifreeze to be added to the cooling system for various temperatures:

Freezing Point (Fahrenheit)	Pints of antifreeze required		
	Ethylene Glycol	Distilled Glycerine	Denatured Alcohol
$+10^{\circ}$	15	17½	15½
0°	17½	21	19½
-10°	21	24½	22½
-20°	25½	27½	26
-30°	26	30½	29½
-40°	28	—	34
-50°	30	—	37½
-60°	32½	—	40½
-70°	34	—	—
