Master's Guide to Off-Camera Flash Barry Staver, 2012-02-01 By emphasizing basic principles of good lighting and how to apply them this informative guide shows advanced amateur photographers and professionals how to improve their photographic skills After explaining different types of light flash basics and the benefits of on and off camera lighting techniques it discusses how to use this information to increase the gasp factor that powerful emotional response that compels the viewer to take a second look at a photograph Also included are assignments meant to help solidify this new flash knowledge for the photographer in order to put it into practice As a bonus the book contains inspirational stories demonstrating real world applications of the techniques from a photojournalist with decades of experience We're Engaged! Bob Davis, Dawn Davis, 2004-07-08 Bob and Dawn Davis have mastered all genres of photography from weddings to children to photographing celebrities at special get away weekends Bob's knowledge of posing lighting composition and his ability to superbly photograph with the environment in which he is immersed is evident in *The Art of Engagement Photography* Bob's beautiful photographs in this book and his explanations as to how he achieved each one will be beneficial to photographers of all levels of expertise Do not let the title fool you his descriptions of how he photographs engagement couples translates to executives families and children portraits as well He utilizes cityscapes and non urban locations not just as backdrops but also as a compliment to his subjects By using diagrams and descriptions along with their powerful images Bob and Dawn explain in simple language how they are able to pose light and properly compose their subjects no matter where the location They state which lens exposure setting and main and fill lights settings and positioning work best for each scenario *Lighting Essentials* Don Giannatti, 2012-04-01 The core goal of photography is representing subjects that have depth and texture in a medium that inherently lacks both those qualities and this book shows the best way to rise to that challenge through the careful application and capture of lighting It demonstrates how to accentuate or minimize textures add or subtract highlights and create or combat shadows to showcase the subjects in the best way and create the illusion of a third dimension in the images Exploring techniques for lighting portraits still life subjects nature images and architectural shots both studio and location lighting are covered in detail The book teaches photographers how to study their subjects with all of the textures colors shapes and surfaces they have then visualize the image as a finished photograph before the photography actually begins With chapters that thoroughly cover the science of lighting and visualization photographers can apply that knowledge and successfully create artful images *Step-by-Step Lighting for Outdoor Portrait Photography* Jeff Smith, 2014-04-15 There are many aspects to professional photography composition camera angles exposure color balance posing and lighting just to name a few However while each of these aspects of photography is important in the creation of a professional portrait lighting presents a special challenge that is part art and part science When the two come together effectively the results are stunning when any one aspect of the recipe falls short the result is a poor exposure or a downright

unflattering look On the artistic side of the scale lighting is one of the primary tools for setting the mood of the portrait It can communicate a sense of bright airy ease or sharp dramatic tension or anything in between Determining what look is right for the client and for their intended use of the resulting portraits is a key decision From there the photographer can begin to use light to sculpt the subject's features minimizing problem areas or accentuating the subject's best features through the selection of light modifiers and the positioning of the lights themselves Moving to the technical side outdoor lighting presents particular challenges but also some significant advantages Outdoors photographers shoot at least partially with natural light While this is most of the day an abundant light source it is largely out of the control of the photographer The light can change from moment to moment as clouds pass between the earth and sun It also changes continually throughout the day as the sun moves across the sky Since he can't completely control the light the photographer must be prepared to adapt his subject's pose and position to create flattering results with the light as is Alternately the photographer can tweak the lighting by augmenting the sunlight with flash or reflectors or even softening it using scrim or other diffusers Of course this leaves another major concern the background Even if the light on the subject can be perfected rarely can the photographer also control the light on an area as large as the background making it a major concern in the process of posing and lighting So given all this why would any photographer choose to make portraits outside One advantage is that the lighting and scenes are free making outdoor photography a great starting point for those entering the field Even established studios however have found that clients simply like the natural timeless look of outdoor portraits This makes them strong sellers Additionally most portrait subjects are more at ease in natural light than when seated in front of bright noisy studio flash units and relaxed subjects translate into better expressions and better overall portraits In this book Smith takes you through the process of lighting outdoor portraits from start to finish covering both the artistic and technical aspects of achieving success Short one or two page lessons are amply illustrated to guide the reader through each phase In many cases before and after images or image sequences showing variations and alternative approaches are presented to facilitate learning Readers are encouraged to have this book with them during practice sessions and work on replicating or refining the provided examples creating a self study course in the art of lighting for outdoor portrait photography
