By asking a few simple follow-up questions, teachers can learn a great deal about student understanding and make better, more informed instructional decisions. The *Beyond the Bubble* books for grades 2-3 and grades 4-5 are each divided into five strands: number, measurement, algebra, geometry, and probability, with six problems per strand. Each problem includes an overview of the objective of the test question, a sample question typical of those found on standardized tests, strategies students employ to solve the problem, conversation starters, student work, student-teacher conversations, and instructional strategies to advance student learning. Teachers will also find suggestions for differentiation, reproducible sample questions, and a comprehensive list of additional resources. With dozens of sample test questions and numerous student samples, *Beyond the Bubble* shows educators how to use multiple-choice tests to provide more purposeful, focused mathematics instruction for all of their students.

This book thoroughly discusses the new standards and clearly develops four key aspects of teaching mathematics: the nature of mathematics as a science of pattern and order; an understanding of how children learn mathematics; a problem-solving view of teaching mathematics; and specific methods for integrating assessment with instruction.
