Get in the Game

Tim Chartier, 2022-09-07 An award winning math popularizer who has advised the US Olympic Committee NFL and NBA offers sports fans a new way to understand truly improbable feats in their favorite games In 2013 NBA point guard Steph Curry wowed crowds when he sunk 11 out of 13 three pointers for a game total of 54 points only seven other players including Michael Jordan and Kobe Bryant had scored more in a game at Madison Square Garden Four years later the University of Connecticut women's basketball team won its hundredth straight game defeating South Carolina 66 55 And in 2010 one forecaster an octopus named Paul correctly predicted the outcome of all of Germany's matches in the FIFA World Cup These are surprising events but are they truly improbable In *Get in the Game* mathematician and sports analytics expert Tim Chartier helps us answer that question condensing complex mathematics down to coin tosses and dice throws to give readers both an introduction to statistics and a new way to enjoy sporting events With these accessible tools Chartier leads us through modeling experiments that develop our intuitive sense of the improbable For example to see how likely you are to beat Curry's three pointer feat consider his 45.3 percent three point shooting average in 2012 13 Take a coin and assume heads is making the shot slightly better than Curry at a fifty percent chance Can you imagine getting heads eleven out of thirteen times With engaging exercises and fun comic book style illustrations by Ansley Earle Chartier's book encourages all readers including those who have never encountered formal statistics or data simulations or even heard of sports analytics but who enjoy watching sports to get in the game

Nonstandard Notebook Tim Chartier, Timothy P. Chartier, Amy Langville, 2024 Our civilization has the odd habit of printing books full of lines We call these notebooks ruled It's an orderly lawful word as befits an orderly lawful document Of course in a ruled notebook the rules are there to invite writing drawing and thinking The rules are riverbanks and the river flowing between them is whatever you want it to be How might changing the lines change the flow of thoughts between them What if the straight parallels gave way to curves clusters and criss crosses What if the once identical pages began to individuate and develop personalities What ideas might come to life if the rules grew unruly Mathematics liked line notebooks does not enjoy a reputation for playful spontaneity If you want to create an unruly notebook for nonstandard thoughts it might seem that algebra is the last place you'd turn But creativity is not as we sometimes imagine a matter of shaking off all constraints It is about playing against them We need rules if only for the sake of breaking them Plotted written and overruled by mathematicians educators and popularizers Tim Chartier and Amy Langville and with a foreword by Ben Orlin this book reveals math's creative side We will see how straight lines can form fractal crenelations how circles can disrupt and unify how waves can create complex landscapes and famous faces The rules of mathematics this book shows are like the rules of a notebook invitations to play
