| 6.RP Understand ratio concepts and use ratio reasoning to solve problems.                                                                                                                                                                                                                                                                                                                                                                                              |  |                                                                           |                     |
| 1. Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. For example, “The ratio of wings to beaks in the bird house at the zoo was 2:1, because for every 2 wings there was 1 beak.” “For every vote candidate A received, candidate C received nearly three votes.”                                                                                                                                      |  |                                                                           |                     |
| 2. Understand the concept of a unit rate $a/b$ associated with a ratio $a:b$ with $b \neq 0$ , and use rate language in the context of a ratio relationship. For example, “This recipe has a ratio of 3 cups of flour to 4 cups of sugar, so there is $\frac{3}{4}$ cup of flour for each cup of sugar.” “We paid \$75 for 15 hamburgers, which is a rate of \$5 per hamburger.” (Note: Exceptions for unit rates in this grade are limited to non-complex fractions.) |  |                                                                           |                     |
| 3. Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations.                                                                                                                                                                                                                                                                         |  |                                                                           |                     |
| 3.a. Make tables of equivalent ratios relating quantities with whole-number measurements, find missing values in the tables, and plot the pairs of values on the coordinate plane. Use tables to compare ratios.                                                                                                                                                                                                                                                       |  |                                                                           |                     |
| 3.b. Solve unit rate problems including those involving unit pricing and constant speed. For example, if it took 7 hours to mow 4 lawns, then at the rate, how many lawns could be mowed in 35 hours? At what rate were lawns being mowed?                                                                                                                                                                                                                             |  |                                                                           |                     |
| 3c. Find a percent of a quantity as a rate per 100 (e.g., 30% of a quantity means 30/100 times the quantity), solve problems involving finding the whole, given a part and the percent.                                                                                                                                                                                                                                                                                |  |                                                                           |                     |

| 6. Use variables to represent numbers and write expressions when solving a real-world or mathematical problem; understand that a variable can represent an unknown number, or, depending on the purpose at hand, any number in a specified set.                                                                                                                                                                                                                        |  |                                                                           |                     |
