Mathematical Modelling For Sustainable Development Environmental Science And Engineering:

Mathematical Modelling for Sustainable Development Marion Hersch, 2006-01-02 Many people are convinced that Sustainable Development and Mathematics are completely unrelated Sustainable Development in its role of a value laden imperative for polluting and over consuming societies seems to be totally unconnected to mathematical reasoning and ignorant of the values behind its symbols Still they are not only connected they need each other Mathematics needs Sustainable Development When science was gradually reinvented in European medieval societies it was legitimised as contributing to the disclosure of God's divine creation The conflicts that emerged became well known as a result of the clash between Galileo and the Church Science found a new legitimacy through recognition that it was a powerful force against superstition In the Enlightenment the argument was pushed forward by attributing Progress to the advancement of science science could produce a better world by promoting rationality In our modern society science has become intimately linked to technology Science for its own sake unfortunately rarely has positive outcomes in terms of research grant applications Meanwhile science and technology and the progress they are supposed to produce meet with wide scale scepticism We all know of the current global problems climate change resource depletion a thinning ozone layer space debris declining biodiversity malnutrition dying ecosystems global inequity and the risk of unprecedented nuclear wars Science has to engage with these problems or lose its legitimacy

Environmental Science and Technology: Sustainable Development Zeng Yang, 2023-06-16 This book features a collection of high-quality and peer-reviewed papers from the 2022 13th International Conference on Environmental Science and Technology, which was held in Shandong, China, during October 21-23, 2022. ICEST is held annually as a platform for presentation of new advances and research results in the fields of Environmental Science and Technology. This year, we focus on the theme *Environmental Protection and Sustainable Development*. With the continuous development of human society, environmental problems are becoming more and more serious. How to realize the rational use of resources, realize the sustainable development of the ecological environment, and protect the environment on which human beings live has become an urgent problem to be solved. Based on the conference theme, this year, the presentations include the topical areas of environmental sustainability, environmental restoration, waste minimization, solid waste management, water pollution control, water treatment, and reclamation, air pollution control, carbon capture and storage, and environmental monitoring, etc.

Sustainable Management of Natural Resources Michel De Lara, Luc Doyen, 2008-08-07 Nowadays, environmental issues, including air and water pollution, climate change, overexploitation of marine ecosystems, exhaustion of fossil resources, conservation of biodiversity, are

receiving major attention from the public stakeholders and scholars from the local to the planetary scales It is now clearly recognized that human activities yield major ecological and environmental stresses with irreversible loss of species destruction of habitat or catastrophic examples of their effects In fact these anthropogenic activities impact not only the states and dynamics of natural resources and ecosystems but also alter human health well being welfare and economic wealth since these resources are support features for human life The numerous outputs furnished by nature include direct goods such as food drugs energy along with indirect services such as the carbon cycle the water cycle and pollination to cite but a few Hence the various ecological changes our world is undergoing draw into question our ability to sustain economic production wealth and the evolution of technology by taking natural systems into account The concept of sustainable development covers such concerns although no universal consensus exists about this notion Sustainable developmentphasizes the need to organize and control the dynamics and the complex interactions between man production activities and natural resources in order to promote their coexistence and their common evolution It points out the importance of studying the interfaces between society and nature and especially the coupling between economics and ecology It induces interdisciplinary scientific research for the assessment the conservation and the management of natural resources
