Mathematics Education and Subjectivity Tony Brown, 2011-07-09 This book is centrally concerned with how mathematics education is represented and how we understand mathematical teaching and learning with view to changing them It considers teachers students and researchers It explores their mathematical thinking and the concepts that this thought produces But also how these concepts acquire cultural layers that mediate our apprehension The book examines some of the linguistic and socio cultural filters that influence mathematical understanding But above all it introduces some contemporary theories of human subjectivity in which subjectivity is seen primarily as consequential to rather than productive of our attempts to represent or categorise the world in which we live That is our sense of who we are results from our attempts to see ourselves against the various versions of the world that we encounter Such theories trouble the very notion of mathematical concepts as apprehended by humans And in foregrounding this concern with subjectivity the book considers mathematics rather differently to styles more familiar in many instances of mathematics education research The book proposes that mathematics can provoke us to think differently about our world and as a result enable our transformative capacities Such an orientation may disturb our understanding of what mathematics is how it exists in an objective sense insofar as mathematical objects can be derived from social filters being applied to the world but also serve as filters on the world capable of producing new social entities

learner appropriates meaning The chapters in this timely book attempt to engage with this shift of focus and offer original contributions to the debate about mathematics teaching and learning They adopt theoretical perspectives while drawing on the classroom as both the source of investigation and the site of potential change and development The book will be of fundamental interest to lecturers and researchers and to teachers concerned with the classroom as a cultural phenomenon

period we have come into contact with many who have stimulated our thinking some of whom belong to the community of Mathematics Educators Our membership of that community has challenged us to make sense of some deep issues related to mathematical learning especially the cognitive and pedagogical faces of mathematical meaning making Alongside this community we are privileged to have been part of another whose members are centrally concerned both with mathematics and education Yet many of them might reject the label of Mathematics Educators This community has historically been clustered around what is now called the Epistemology and Learning Group at the Massachusetts Institute of Technology Their work has focused our attention on cognitive science ethnography sociology artificial intelligence and other related disciplines Crucially it has forced our awareness of the construction of computational settings as a crucial component of the struggle to understand how mathematical learning happens We have sometimes felt that few have tried to span both communities Indeed an analysis of the references in the literature would we are sure reveal that the two communities have often ignored each other's strengths One reason for writing this book is born of our hope that we might draw together Mathematics Educators and mathematics educators and assist both communities in recognising that there are insights that might be derived from each other
