compressor disk machining. They are rough milling operations, blade finish operations and hub finish operations. The rough milling is adopted to roughly cut out the shape of the impeller from initial dimensions of the stock material. It cuts out the material between the pressure surface and the suction surface. At this stage the efficiency of the removal rate is the main factor to be considered. In this case rough operations take 67 min and were carried out with an end mill $\varnothing 40$ and 6 mm nose radius and an end mill $\varnothing 12$ and 1 mm nose radius.

Generally, the blade and hub surfaces are machined using swarf milling, which provides a line contact between the tool and the workpiece. The periphery of the tool perfectly touches the workpiece geometry. Hence, very high surface quality in the direction of feed and the direction perpendicular to the feed is obtained. Head milling with a flat end mill, with appropriate lead angle, is highly recommended in this case because of technological and geometrical advantages of using a flat end mill [45]. Finish operations took 110 min and the tool used is an end mill $\varnothing 12\text{mm}$ and 1mm nose radius.

The software used for compressor disk virtual verification is Vericut. Taking into account the high probabilities of collision, virtual verification before real machining is of vital importance to prevent from part and machining collisions.

Geometric Design Tolerancing: Theories, Standards and Applications Hoda A. ElMaraghy, 2012-12-06 The importance of proper geometric dimensioning and tolerancing as a means of expressing the designer's functional intent and controlling the inevitable geometric and dimensional variations of

mechanical parts and assemblies is becoming well recognized. The research efforts and innovations in the field of tolerancing design, the development of supporting tools, techniques and algorithms, and the significant advances in computing software and hardware all have contributed to its recognition as a viable area of serious scholarly contributions. The field of tolerancing design is successfully making the transition to maturity where deeper insights and sound theories are being developed to offer explanations and reliable implementations are introduced to provide solutions. Machine designers realized very early that manufacturing processes do not produce the nominal dimensions of designed parts. The notion of associating a lower and an upper limit referred to as tolerances with each dimension was introduced. Tolerances were specified to ensure the proper function of mating features. Fits of mating features included clearances, location fits and interference fits with various sub grades in each category assigned a tolerance value depending on the nominal size of the mating features. During the inspection process a part is rejected if a dimension fell outside the specified range. As the accuracy requirements in assemblies became tighter, designers had to consider other critical dimensions and allocate tolerances to them in order to ensure the assembly's functionality.

Kuljanic, 2007-03-23 Manufacturing a product is not difficult; the difficulty consists in manufacturing a product of high quality at a low cost and rapidly. Drastic technological advances are changing global markets very rapidly. In such conditions, the ability to compete successfully must be based on innovative ideas and new products which have to be of high quality yet low in price. One way to achieve these objectives would be through massive investments in research of computer based technology and by applying the approaches presented in this book. The First International Conference on Advanced Manufacturing Systems and Technology AMST87 was held in Opatija, Croatia in October 1987. The Second International Conference on Advanced Manufacturing Systems and Technology AMSV90 was held in Trento, Italy in June 1990. The Third, Fourth, Fifth and Sixth Conferences on Advanced Manufacturing Systems and Technology were all held in Udine, Italy as follows: AMST93 in April 1993, AMST96 in September 1996, AMST99 in June 1999 and AMST02 in June 2002.
