Material Architecture:

Material Architecture John Fernandez, 2012-08-21 Composed of a series of essays this book deals with the broad issues affecting the nature of architectural materials and provides a focused review of the state of the art materials. It also provides designers with the tools they need to evaluate and select from the thousands of different materials that are available to them. The book is organized into three sections. Time looks at how the materials used in architectural design have changed over the years showing how we have come to use the materials we do in contemporary design. Materials covers all five material families: metals, polymers, ceramics, composites, and natural materials, giving in-depth information on their properties, behavior, origins, and uses in design. It also introduces a review of the cutting edge research for each family. Systems outlines the technical design orientated research that uncovers how new architectural assemblies can be designed and engineered. All of this practical advice is given along with many real case examples illustrating how this knowledge and information has been and can be used in architectural design.

Heterogeneous Constructions Aaron Forrest, Yasmin Vobis, Brett Schneider, 2024-09-23 Sustainable, circular, up to date. Most modern buildings are built from diverse materials but few confront their manifold composition as a question of both design and performance. This book takes a close look at a series of global building traditions and contemporary practices to uncover the possibilities and challenges of working with mixed materials. Visually stunning, color-coded drawings reveal the materials and construction for every project. Through case studies, design experiments, and writings, the authors examine the opportunities of heterogeneous construction for contemporary, sustainable, circular, and culturally situated architecture. With contributions by Jeannette Kuo, Ajay Manthripragada, and Jes s Vassallo, and photography by Naho Kubota. Graphic design by Andrew LeClair. Richly illustrated case studies of lesser-known hybrid construction techniques. Beautiful graphic design and unique spot color printing reveal the interrelationships of materials in construction. In-depth essays that discuss the technical, cultural, and environmental implications of heterogeneous construction.

Materials for Architects and Builders Arthur R. Lyons, 2007. *Materials for Architects and Builders* provides an introduction to a wide range of building materials. It explains in detail the manufacture, key physical properties, specification, and uses of the standard building products everything a student would need to know. The book also describes many recent technological innovations and rediscovered materials reflecting an increased concern for environmental issues within the industry. This new edition has been completely updated to reflect the amended Building Regulations, the latest British and European Standards, as well as incorporating current advice and information from the Building Research Establishment. Dr Arthur Lyons is a teacher fellow and principal lecturer in building materials at the Leicester School of Architecture within the Faculty of Art and Design at De Montfort University UK. He has taught the subject of building materials for thirty-five years to a wide range of students within the built environment disciplines. The text covers the widest range of materials from standard products to ecofriendly materials and components. Up to date with respect to the
