calculus this volume is suitable for advanced undergraduate and graduate students of mathematics physics and engineering Rather than a comprehensive account it offers an introduction to the essential ideas and methods of differential geometry Part 1 begins by employing vector methods to explore the classical theory of curves and surfaces An introduction to the differential geometry of surfaces in the large provides students with ideas and techniques involved in global research Part 2 introduces the concept of a tensor first in algebra then in calculus It covers the basic theory of the absolute calculus and the fundamentals of Riemannian geometry Worked examples and exercises appear throughout the text *Elementary Matrix Algebra* Franz E. Hohn, 2013-02-19 This complete and coherent exposition complemented by numerous illustrative examples offers readers a text that can teach by itself Fully rigorous in its treatment it offers a mathematically sound sequencing of topics The work starts with the most basic laws of matrix algebra and progresses to the sweep out process for obtaining the complete solution of any given system of linear equations homogeneous or nonhomogeneous and the role of matrix algebra in the presentation of useful geometric ideas techniques and terminology Other subjects include the complete treatment of the structure of the solution space of a system of linear equations the most commonly used properties of determinants and linear operators and linear transformations of coordinates Considerably more material than can be offered in a one semester course appears here this comprehensive volume by Franz E Hohn Professor of Mathematics at the University of Illinois for many years provides instructors with a wide range of choices in order to meet differing interests and to accommodate students with varying backgrounds
