Designing Fair Curves and Surfaces Nickolas S.

Sapidis,1994-01-01 This state of the art study of the techniques used for designing curves and surfaces for computer aided design applications focuses on the principle that fair shapes are always free of unessential features and are simple in design The authors define fairness mathematically demonstrate how newly developed curve and surface schemes guarantee fairness and assist the user in identifying and removing shape aberrations in a surface model without destroying the principal shape characteristics of the model Aesthetic aspects of geometric modeling are of vital importance in industrial design and modeling particularly in the automobile and aerospace industries Any engineer working in computer aided design computer aided manufacturing or computer aided engineering will want to add this volume to his or her library Researchers who have a familiarity with basic techniques in computer aided graphic design and some knowledge of differential geometry will find this book a helpful reference It is essential reading for statisticians working on approximation or smoothing of data with

mathematical curves or surfaces Mathematical Methods in Computer Aided Geometric Design Tom Lyche, Larry L. Schumaker, 2014-05-10 Mathematical Methods in Computer Aided Geometric Design covers the proceedings of the 1988 International Conference by the same title held at the University of Oslo Norway This text contains papers based on the survey lectures along with 33 full length research papers This book is composed of 39 chapters and begins with surveys of scattered data interpolation spline elastic manifolds geometry processing the properties of Bzier curves and Grbner basis methods for multivariate splines The next chapters deal with the principles of box splines smooth piecewise quadric surfaces some applications of hierarchical segmentations of algebraic curves nonlinear parameters of splines and algebraic aspects of geometric continuity These topics are followed by discussions of shape preserving representations box spline surfaces subdivision algorithm parallelization interpolation systems and the finite element method Other chapters explore the concept and applications of uniform bivariate hermite interpolation an algorithm for smooth interpolation and the three B spline constructions The concluding chapters consider the three B spline constructions design tools for shaping spline models approximation of surfaces constrained by a differential equation and a general subdivision theorem for Bzier triangles This book will prove useful to mathematicians and advance mathematics students Mathematics of Surfaces XII Ralph Martin, 2007-08-22 This book constitutes the refereed proceedings of the 12th IMA International Conference on the Mathematics of Surfaces held in Sheffield UK in September 2007 The 22 revised full papers presented together with 8 invited papers were carefully reviewed and selected from numerous submissions Among the topics addressed is the applicability of various aspects of mathematics to engineering and computer science especially in domains such as computer aided design computer vision and computer graphics The papers cover a range of ideas from underlying theoretical tools to industrial uses of surfaces Research is reported on theoretical aspects of surfaces including topology parameterization differential geometry and conformal geometry and also more practical topics such as geometric tolerances computing shape from shading and medial axes for industrial applications Other specific areas of interest include subdivision schemes solutions of differential equations on surfaces knot insertion surface segmentation surface deformation and surface fitting

Computational Methods for Algebraic Spline Surfaces Tor Dokken, Bert Jüttler, 2006-05-24 This volume contains revised papers that were presented at the international workshop entitled Computational Methods for Algebraic Spline Surfaces COMPASS which was held from September 29 to October 3 2003 at Schlo Weinberg Kefermarkt Austria The workshop was mainly devoted to approximate algebraic geometry and its applications The organizers wanted to emphasize the novel idea of approximate implicitization that has strengthened the existing link between CAD CAGD Computer Aided Geometric Design and classical algebraic geometry The existing methods for exact implicitization i.e. for conversion from the parametric to an implicit representation of a curve or surface require exact arithmetic and are too slow and too expensive for industrial use Thus the duality of an implicit representation and a parametric representation is only used for low degree

algebraic surfaces such as planes spheres cylinders cones and toroidal surfaces On the other hand this duality is a very useful tool for developing efficient algorithms Approximate implicitization makes this duality available for general curves and surfaces The traditional exact implicitization of parametric surfaces produce global representations which are exact everywhere The surface patches used in CAD however are always defined within a small box only they are obtained for a bounded parameter domain typically a rectangle or in the case of trimmed surface patches a subset of a rectangle Consequently a globally exact representation is not really needed in practice

Interactive Curve Modeling Muhammad Sarfraz, 2007-10-24 This book covers Curve Modeling with solutions to real life problems relating to Computer Graphics Vision Image Processing Geometric Modeling and CAD CAM Chapters deal with basic concepts curve design techniques and their use to various applications and a wide range of problems with their automated solutions through computers The book provides an invaluable resource which focuses on interdisciplinary methods and affiliates up to date methodologies It aims to stimulate provide a source where the reader can find the latest developments in the field including a variety of techniques applications and systems necessary for solving real life problems
