Researching Mathematics Education in South Africa Renuka Vithal, Jill Adler, Christine Keitel, 2005 Reflecting on the theoretical and ideological work that has contributed to the growth of mathematics education research in South Africa this study provides a historical analysis of forces that have changed and shaped mathematics curricula over the years The themes researched and explored include radical pedagogy progressive classroom practices ethnomathematics and South African mathematics education research within both its local and international contexts Mindset Mathematics Jo Boaler, Jen Munson, Cathy Williams, 2018-02-28 Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts In this volume you will find a collection of low floor high ceiling tasks that will help you do just that by looking at the big ideas at the fifth grade level through visualization play and investigation During their work with tens of thousands of teachers authors Jo Boaler Jen Munson and Cathy Williams heard the same message that they want to incorporate more brain science into their math instruction but they need guidance in the techniques that work best to get across the concepts they needed to teach So the authors designed Mindset Mathematics around the principle of active student engagement with tasks that reflect the latest brain science on learning Open creative and visual mathematics tasks have been shown to improve student test scores and more importantly change their relationship with mathematics and start believing in their own potential The tasks in Mindset Mathematics reflect the lessons from brain science that There is no such thing as a math person anyone can learn mathematics to high levels Mistakes struggle and challenge are the most important times for brain growth Speed is unimportant in mathematics Mathematics is a visual and beautiful subject and our brains want to think visually about mathematics With engaging questions open ended tasks and four color visuals that will help kids get excited about mathematics Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards CCSS and can be used with any current curriculum **Research in Mathematics Education in Australasia 2020-2023** Carmel Mesiti, Wee Tiong Seah, Berinderjeet Kaur, Cath Pearn, Anthony Jones, Scott Cameron, Emma Every, Kate Copping, 2024-07-02 This book provides a critical review of research in mathematics education published in or about the Australasian region in the four years from 2020 to 2023 Research in Mathematics Education in Australasia 2020 2023 RiMEA 2020 2023 is the eleventh edition of the four yearly review of mathematics education research in Australasia It is compiled by the Mathematics Education Research Group of Australasia MERGA It is primarily focused on research from Australia New Zealand and Singapore but also includes research from other Southeast Asian countries and the South Pacific Although each edition of RiMEA is shaped by the preceding volumes each new edition evolves in response to events coinciding with each new review period Following an introduction by the editors RiMEA 2020 2023 will contain a

reflection chapter authored by the editors of the previous edition Research in Mathematics Education in Australasia 2016 2019 on how research in mathematics education in the Australasian region has progressed over the four years since This book provides a comprehensive critical review of research literature in the Australasian region on significant topics published within the review period It serves as a resource for researchers and promotes quality research in the Australasian region Furthermore it provides an introduction to mathematics education research in the Australasian region for Ph D candidates early career researchers and other researchers beginning a new field of research

Didactics of Mathematics as a Scientific Discipline Rolf Biehler, Roland W. Scholz, Rudolf Sträßer, Bernard Winkelmann, 1993-11-30 Didactics of Mathematics as a Scientific Discipline describes the state of the art in a new branch of science Starting from a general perspective on the didactics of mathematics the 30 original contributions to the book drawn from 10 different countries go on to identify certain subdisciplines and suggest an overall structure or topology of the field The book is divided into eight sections 1 Preparing Mathematics for Students 2 Teacher Education and Research on Teaching 3 Interaction in the Classroom 4 Technology and Mathematics Education 5 Psychology of Mathematical Thinking 6 Differential Didactics 7 History and Epistemology of Mathematics and Mathematics Education 8 Cultural Framing of Teaching and Learning Mathematics Didactics of Mathematics as a Scientific Discipline is required reading for all researchers into the didactics of mathematics and contains surveys and a variety of stimulating reflections which make it extremely useful for mathematics educators and teacher trainers interested in the theory of their practice Future and practising teachers of mathematics will find much to interest them in relation to their daily work especially as it relates to the teaching of different age groups and ability ranges The book is also recommended to researchers in neighbouring disciplines such as mathematics itself general education educational psychology and cognitive science

Perspectives on Mathematics Education Bent Christiansen, A.G. Howson, Michael Otte, 1986 BACOMET cannot be evaluated solely on the basis of its publications It is important then that the reader with only this volume on which to judge both the BACOMET activities and its major outcome to date should know some thing of what preceded this book s publication For it is the story of how a group of educators mainly tutors of student teachers of mathematics committed themselves to a continuing period of work and self education The concept of BACOMET developed during a series of meetings held in 1978 79 between the three editors Bent Christiansen Geoffrey Howson and Michael Otte at which we expressed our concern about the contributions from mathematics education as a discipline to teacher education both as we observed it and as we participated in it The short time which was at the teacher educator s disposal allied to the limited knowledge and experience of the students on which one had to build raised puzzling problems concerning priorities and emphases The recognition that these problems were shared by educators from many different countries was matched by the fact that it would be fruitless to attempt to search for an internationally or even nationally acceptable solution to our problems Different contexts and traditions rule this out

The Blank Swan Elie Ayache, 2010-05-05 October 19th 1987 was a day of huge change for the global finance industry On this day the stock market crashed the Nobel Prize winning Black Scholes formula failed and volatility smiles were born and on this day Elie Ayache began his career on the trading floor of the French Futures and Options Exchange Experts everywhere sought to find a model for this event and ways to simulate it in order to avoid a recurrence in the future but the one thing that struck Elie that day was the belief that what actually happened on 19th October 1987 is simply non reproducible outside 19th October 1987 you cannot reduce it to a chain of causes and effects or even to a random generator that can then be reproduced or represented in a theoretical framework The Blank Swan is Elie s highly original treatise on the financial markets presenting a totally revolutionary rethinking of derivative pricing and technology It is not a diatribe against Nassim Taleb s The Black Swan but criticises the whole background or framework of predictable and unpredictable events white and black swans alike i e the very category of prediction In this revolutionary book Elie redefines the components of the technology needed to price and trade derivatives Most importantly and drawing on a long tradition of philosophy of the event from Henri Bergson to Gilles Deleuze to Alain Badiou and on a recent brand of philosophy of contingency embodied by the speculative materialism of Quentin Meillassoux Elie redefines the market itself against the common perceptions of orthodox financial theory general equilibrium theory and the sociology of finance This book will change the way that we think about derivatives and approach the market If anything derivatives should be renamed contingent claims where contingency is now absolute and no longer derivative and the market is just its medium The book also establishes the missing link between quantitative modelling no longer dependent on probability theory but on a novel brand of mathematics which Elie calls the mathematics of price and the reality of the market Calendar of Dalhousie
