Glycobiology Minoru Fukuda, Akira Kobata, 1993 Glycobiology is now an area of intense research activity due to a growing awareness of the important biological roles of glycoproteins and the development of recombinant glycoproteins for therapeutic purposes This book describes detailed protocols for all the main methods currently used to elucidate the structure and biosynthesis of glycoproteins It covers the isolation fractionation and structural characterization of glycoproteins and also of phosphatidylinositol anchors *Glycobiology A Practical Approach* describes the essential analytical techniques required to study glycoproteins and will be an important practical guide for all researchers including those in the pharmaceutical industry working in this field *Lehninger Principles of Biochemistry* David L. Nelson, Albert L.

Lehninger, Michael M. Cox, 2008-02 Authors Dave Nelson and Mike Cox combine the best of the laboratory and best of the classroom introducing exciting new developments while communicating basic principles of biochemistry **A Practical**

Guide to Using Glycomics Databases Kiyoko F. Aoki-Kinoshita, 2016-12-06 This book provides glycoscientists with a handbook of useful databases that can be applied to glycoscience research Although many databases are now publicly available one of the hurdles for their users is the learning curve required to effectively utilize those databases Therefore this book not only describes the existing databases but also provides tips on how to obtain the target data That is because many databases provide a variety of data that could be obtained from different perspectives each chapter provides users with potential biological questions that can be answered by a particular database and step by step instructions with figures on how to obtain that data Troubleshooting tips are also provided to aid users encountering problems that can be predicted when using these databases Moreover contact information for each database is provided in case unexpected issues arise

Glycopeptides and Related Compounds David G. Large, Christopher D. Warren, 1997-05-06 Presents state of the art methods for the synthesis analysis and conformational investigation of glycoproteins and glycopeptides Discusses the history of glycopeptide synthesis therapeutic applications and the future of research *Biochromatography* M. A.

Vijayalakshmi, 2002-02-14 The field of bioseparation and biochromatography in particular is advancing very rapidly as our knowledge of the properties of molecules and atomic forces increases This volume covers the basic principles of biochromatography in detail It assesses different techniques and includes a large number of applications providing the reader with a mult

Inositol Phospholipid Metabolism and Phosphatidyl Inositol Kinases A. Kuksis, 2003-09-12 This book offers a wide ranging and review of cutting edge developments along with tried and tested methods for isolation resolution and quantification of inositol phospholipids and inositol polyphosphates in both cells and tissues It includes detailed and rigorous methodology for identification of molecular species of inositol phospholipids including their phosphates and glycans with numerous examples of specific applications Wherever available both chromatographic and mass spectrometric evidence is presented for specific phospholipid involvement in the biochemical transformations accompanying metabolic signalling

events and where possible controversies have been resolved on basis of analytical ambiguity The review of the lipid analyses extends to products of phosphatidylinositol kinases phosphatases and lipases A general review chapter is included on metabolic signalling with special emphasis on the lipid products of 3 kinases In view of the general lack of commercially available standards for inositol phospholipids and inositol phosphates the book concludes with a chapter on the preparation and collection of chromatographic and mass spectrometric proof of their purity and identity This book complements recent books and reviews on the mechanisms metabolic signalling receptor binding and the polypeptide structure of the proteins involved in the various signalling pathways It also complements those texts that deal exclusively with the chemical synthesis of the phosphatidylinositols and their polyphosphates and glycans Glycans in Cell Interaction and Recognition Michele
