Benchmarking Transaction and Analytical Processing Systems Anja Bog, 2013-07-11 Systems for Online Transaction Processing OLTP and Online Analytical Processing OLAP are currently separate The potential of the latest technologies and changes in operational and analytical applications over the last decade have given rise to the unification of these systems which can be of benefit for both workloads Research and industry have reacted and prototypes of hybrid database systems are now appearing Benchmarks are the standard method for evaluating comparing and supporting the development of new database systems Because of the separation of OLTP and OLAP systems existing benchmarks are only focused on one or the other With the rise of hybrid database systems benchmarks to assess these systems will be needed as well Based on the examination of existing benchmarks a new benchmark for hybrid database systems is introduced in this book It is furthermore used to determine the effect of adding OLAP to an OLTP workload and is applied to analyze the impact of typically used optimizations in the historically separate OLTP and OLAP domains in mixed workload scenarios

Repurposing Legacy Data Jules J. Berman, 2015-03-13 Repurposing Legacy Data Innovative Case Studies takes a look at how data scientists have re purposed legacy data whether their own or legacy data that has been donated to the public domain Most of the data stored worldwide is legacy data data created some time in the past for a particular purpose and left in obsolete formats As with keepsakes in

an attic we retain this information thinking it may have value in the future though we have no current use for it The case studies in this book from such diverse fields as cosmology quantum physics high energy physics microbiology psychiatry medicine and hospital administration all serve to demonstrate how innovative people draw value from legacy data By following the case examples readers will learn how legacy data is restored merged and analyzed for purposes that were never imagined by the original data creators Discusses how combining existing data with other data sets of the same kind can produce an aggregate data set that serves to answer questions that could not be answered with any of the original data Presents a method for re analyzing original data sets using alternate or improved methods that can provide outcomes more precise and reliable than those produced in the original analysis Explains how to integrate heterogeneous data sets for the purpose of answering questions or developing concepts that span several different scientific fields *Fundamentals of Stream Processing* Henrique C. Turaga,2014-02-13 This book teaches fundamentals of stream processing covering application design distributed systems infrastructure and continuous analytic algorithms

Logic and Critical Thinking in the Biomedical Sciences Jules J. Berman,2020-07-08 All too often individuals engaged in the biomedical sciences assume that numeric data must be left to the proper authorities e g statisticians and data analysts who are trained to apply sophisticated mathematical algorithms to sets of data This is a terrible mistake Individuals with keen observational skills regardless of their mathematical training are in the best position to draw correct inferences from their own data and to guide the subsequent implementation of robust mathematical analyses Volume 2 of Logic and Critical Thinking in the Biomedical Sciences provides readers with a repertoire of deductive non mathematical methods that will help them draw useful inferences from their own data Volumes 1 and 2 of Logic and Critical Thinking in the Biomedical Sciences are written for biomedical scientists and college level students engaged in any of the life sciences including bioinformatics and related data sciences Demonstrates that a great deal can be deduced from quantitative data without applying any statistical or mathematical analyses Provides readers with simple techniques for quickly reviewing and finding important relationships hidden within large and complex sets of data Using examples drawn from the biomedical literature discusses common pitfalls in data interpretation and how they can be avoided **Computational Physics - A Practical**

Temirbekovich Zunnunov, 2024-12-02 The book is aimed at developing and analyzing fundamentally new mathematical models of dynamic processes in the Earth's geospheres taking into account heredity in order to detect predict natural and man-made threats. It is known that many natural technical and social systems are characterized by the property of heredity or memory when the actual dynamic characteristics of the system are determined by its entire prehistory. Mathematical formalization of such properties in mathematical models is usually ensured by the introduction of integral terms memory functionals with difference kernels. Therefore taking into account the effects of heredity in dynamic processes and systems also determines the relevance of the study. The topic is devoted to the study of various dynamic processes in geospheres using mathematical modeling. Dynamic processes discussed in the book: geomagnetic dynamo geoaoustic emission microseismic vibrations deformation processes solar activity seismic activity processes of transfer and accumulation of radon concentration. The book was the first to examine some dynamic processes that have hereditary effects. Research methods are based on the following sections of mathematics: mathematical and functional analysis equations of mathematical physics differential equations and their systems integro-differential equations fractional calculus vector analysis computational mathematics numerical methods. Also methods of object-oriented programming parallel programming. It should be noted that the research used the principle of the model algorithm program triad. Therefore one of the chapters of the book is devoted to computational algorithms with the possibility of parallelization. The reader will become familiar with new models of geodynamic processes with heredity and approaches to their study. The presented numerical algorithms can be reproduced or applied to others similar processes. The book will provide comprehensive information about the processes being studied and methods of their research. All necessary references will be provided including those defining the current state of affairs in this issue. **Genetic Dissection of Important Traits in Aquaculture: Genome-scale Tools Development, Trait**
