Google's Go programming language which has been available for more than a decade has changed from being a curiosity for tech enthusiasts to the robust programming language used in some of the most significant cloud native software projects worldwide Although Go also known as Golang was developed by Google staff members primarily Rob Pike a notable engineer at Google and a veteran Unix expert it is not officially a Google project Instead Go is an open source project that is being developed by the community with strong leadership guiding the language's future direction and how it should be utilized Go is designed to be easy to use simple to learn and easy for other developers to read Go's feature set is somewhat small especially in comparison to other programming languages like C Because of its syntax which is similar to that of C Go is relatively simple for experienced C developers to understand Nevertheless a lot of Go's features particularly its functional programming and concurrency features are reminiscent of Erlang and other older languages Go shares many similarities with Java as a C like language for creating and managing cross platform enterprise applications of various kinds You might also compare Go and Python to facilitate the quick construction of code that might execute anywhere but the distinctions between the two languages are much more than the similarities quick statically typed compiled language that feels like a dynamically typed interpreted language is how the Go documentation characterizes Go Even a big Go program can be compiled in a few seconds Additionally Go does not have as much overhead as C style includes files and libraries
