Computational Modeling of Multilevel Organisational Learning and Its Control Using Self-modeling Network Models Gülay Canbaloğlu, Jan Treur, Anna Wiewiora, 2023-06-16 Although there is much literature on organisational learning mathematical formalisation and computational simulation there is no literature that uses mathematical modelling and simulation to represent and explore different facets of multilevel learning This book provides an overview of recent work on mathematical formalisation and computational simulation of multilevel organisational learning by exploiting the possibilities

of self modeling network models to address it This is the first book addressing mathematical formalisation and computational modeling of multilevel organisational learning in a systematic principled manner A self modeling network modeling approach from AI and Network Science is used where in a reflective manner some of the network nodes called self model nodes represent parts of the network s own network structure characteristics. This is supported by a dedicated software environment allowing to design and implement higher order adaptive network models by specifying them in a conceptual manner at a high level of abstraction in a standard table format without any need of algorithmic specification or programming This modeling approach allows to model the development of knowledge in an organisational setting in a neatly structured manner at three different levels for the usage adaptation and control respectively of the underlying mental models Several examples of realistic cases of multilevel organisational learning are used to illustrate the approach Crucial concepts such as the aggregation of mental models to form shared mental models out of individual mental models are addressed extensively It is shown how to model context sensitive control of organisational learning taking into account a wide variety of context factors for example relating to levels of expertise of individuals or to leadership styles of managers involved Mathematical equilibrium analysis of models of organisational learning is also addressed among others allowing verification of correctness of the implemental models in comparison to their conceptual design Chapters in this book also contribute to the Management and Business Sciences research by demonstrating how computational modeling can be used to capture complex management phenomena such as multilevel organizational learning This book has a potential implication for practice by demonstrating how computational modeling can be used to capture learning scenarios which then provide a basis for more informed managerial decisions Mathematical Modeling, Computational Intelligence Techniques and Renewable Energy Manoj Sahni, José M. Merigó, Walayat Hussain, Ernesto León-Castro, Raj Kumar Verma, Ritu Sahni, 2023-05-08 The book is a collection of best selected research papers presented at the Third International Conference on Mathematical Modeling Computational Intelligence Techniques and Renewable Energy MMCITRE 2022 organized by the University of Technology Sydney Australia in association with the Department of Mathematics Pandit Deendayal Energy University India and Forum for Interdisciplinary Mathematics This book presents new knowledge and recent developments in all aspects of computational techniques mathematical modeling energy systems applications of fuzzy sets and intelligent computing The book provides innovative works of researchers academicians and students in the area of interdisciplinary mathematics statistics computational intelligence and renewable energy Computational Intelligence in Information Systems Somnuk Phon-Amnuaisuk, Thien-Wan Au, Saiful Omar, 2016-10-25 This book constitutes the Proceedings of the Computational Intelligence in Information Systems conference CIIS 2016 held in Brunei November 18 20 2016 The CIIS conference provides a platform for researchers to exchange the latest ideas and to present new research advances in general areas related to computational intelligence and its applications The 26 revised full papers presented in this book have been carefully selected
