Math Measurement Word Problems Rebecca Wingard-Nelson, 2010-07-01 Presents a step by step guide to understanding word problems with math measurement Provided by publisher **Computers, Rigidity, and Moduli** Shmuel Weinberger, 2020-12-08 This book is the first to present a new area of mathematical research that combines topology geometry and logic Shmuel Weinberger seeks to explain and illustrate the implications of the general principle first emphasized by Alex Nabutovsky that logical complexity engenders geometric complexity He provides applications to the problem of closed geodesics the theory of submanifolds and the structure of the moduli space of isometry classes of Riemannian metrics with curvature bounds on a given manifold Ultimately geometric complexity of a moduli space forces functions defined on that space to have many critical points and new results about the existence of extrema or equilibria follow The main sort of algorithmic problem that arises is recognition is the presented object equivalent to some standard one If it is difficult to determine whether the problem is solvable then the original object has doppelgangers that is other objects that are extremely difficult to distinguish from it Many new questions emerge about the algorithmic nature of known geometric theorems about dichotomy problems and about the metric entropy of moduli space Weinberger studies them using tools from group theory computability differential geometry and topology all of which he explains before use Since several examples are worked out the overarching principles are set in a clear relief that goes beyond the details of any one problem

Plain Language Stefano Rastelli,2024-11-29 Plain Language A Psycholinguistic Approach employs principles from the field of psycholinguistics to explore factors that make a sentence or text easy or difficult to process by the cognitive mechanisms that support language processing and describes how levels of difficulty might function within bureaucratic power structures Drawing from experimental data on readability the author employs a metaphor of three ghost readers in the mind that exist and interact with each other the syntactic reader the one searching for the structure the statistical reader the one driven by previous experiences and finally the pragmatic reader the one searching for meaning The penultimate chapter concerns a novel psycholinguistic experiment showing that complexly written texts may prevent adult citizens with average
