Infectious Disease Epidemiology Theory And Practice:

Infectious Disease Epidemiology Kenrad E. Nelson, Carolyn Masters Williams, 2007 Covers a range of essential topics from a survey of important historical epidemics to study designs for infectious disease investigations The first part of the text covers ID epidemiology background and methodology whereas the second focuses on specific diseases as examples of different transmission modalities TB HIV and Influenza are among the pathogens discussed in great detail Includes four new chapters on immunology measles meningococcal disease and vector borne infections The HIV chapter has been expanded to include issues of host genetics as well as a review of behavioral interventions

Infectious Disease Epidemiology Kenrad E. Nelson, Carolyn Masters Williams, Neil M. H. Graham, 2004 Second edition coming in July This comprehensive resource applies the fundamentals of epidemiology to the study of infectious diseases ID In the first section readers will learn about basic epidemiologic methods for the study of ID plus be introduced to newer techniques like geographical information systems mathematical modeling and genetic laboratory tools In the second section the book covers major infectious diseases to illustrate both the range of techniques and issues vital to epidemiologists and to highlight those diseases that have a major impact on health around the world These include diseases of high mortality and morbidity such as malaria HIV STDs diarrhea and those with unique epidemiology such as parasitic diseases and Lyme disease

Environmental Health - Theory and Practice Ramesha Chandrappa, Diganta Bhusan Das, 2021-01-04 This two-volume work discusses environmental health, the branch of public health concerned with all aspects of the natural and built environment affecting human health, and addresses key issues at the global and local scales. The work offers an overview of the methodologies and paradigms that define this burgeoning field, ranging from ecology to epidemiology and from pollution to environmental psychology, and addresses a wide variety of global concerns, including air quality, water and sanitation, food security, chemical, physical hazards, occupational health, disease control, and injuries. The authors intend to provide up-to-date information for environmental health professionals and to provide a reference for students and consultants working at the interface between health and environmental sectors. Volume 2 covers the technological, legislative, and logistical solutions for coping with environmental health issues. The principles of environmental legislation are explained in national and international contexts, and assessments are mapped out to craft informed governance plans for health and environmental management. Mitigation measures are introduced to control wastewater and solid waste management and air and noise pollution, and adaptation strategies for emergency preparedness and disaster recovery are discussed. **Public Health** B.
