Fuzzy Logic with Engineering Applications Timothy J. Ross, 2005-04-08. Fuzzy logic refers to a large subject

dealing with a set of methods to characterize and quantify uncertainty in engineering systems that arise from ambiguity imprecision fuzziness and lack of knowledge Fuzzy logic is a reasoning system based on a foundation of fuzzy set theory itself an extension of classical set theory where set membership can be partial as opposed to all or none as in the binary features of classical logic Fuzzy logic is a relatively new discipline in which major advances have been made over the last decade or so with regard to theory and applications Following on from the successful first edition this fully updated new edition is therefore very timely and much anticipated Concentration on the topics of fuzzy logic combined with an abundance of worked examples chapter problems and commercial case studies is designed to help motivate a mainstream engineering audience and the book is further strengthened by the inclusion of an online solutions manual as well as dedicated software codes Senior undergraduate and postgraduate students in most engineering disciplines academics and practicing engineers plus some working in economics control theory operational research etc will all find this a valuable addition to their bookshelves

Timetabling IV Edmund Burke, Patrick De Causmaecker, 2003-08-28

This volume contains a selection of papers from the 4th International Conference on the Practice and Theory of Automated Timetabling PATAT 2002 held in Gent August 21-23 2002 Since the first conference in Edinburgh in 1995 the range of timetabling applications at the conferences has become broader and more diverse In the selected papers volume from the 1995 conference there were just two contributions out of 22 which did not specifically address school and university timetabling In the selected papers volume from the 1997 conference in Toronto the number of papers which tackled non educational problems increased Two of the papers addressed more than one timetabling application In both of these papers

educational applications were considered in addition to other applications. A further three papers were concerned with non educational applications. The conference steering and programme committees have worked hard to attract a wide range of timetabling applications. In the conference held in Konstanz in 2000 the diversification of timetabling problems increased significantly. Of the 21 selected papers in the postconference volume just 13 were specifically concerned with educational timetabling. In the previous volumes the papers had been sectioned according to solution technique. In the Konstanz volume the papers were classified according to application domains. One section of the volume was entitled Employee Timetabling while sports timetabling, aircraft scheduling and general software architectures for timetabling were also represented. In the present volume more than one third of the 21 papers discuss problems in application areas other than academic and educational ones. Sports timetabling and hospital timetabling are particularly well represented.
