

Chapter 17

COLOR SYMBOLS AND INTERPRETATION

INTRODUCTION

The final determinant is the use of color in the concept. While there may be some questions regarding the movement and shading factors, color is not prone to such doubting. The different hues are objective and recognizable in all cultures where there are names for them.¹ Kouwer (1949) discusses the background of color in different societies, cultures, and in psychological testing. An understanding of the dynamics of color plays an intrinsic role in color interpretation.² These introductory remarks with emphasis on the physical and physiological objectivity of the color experience should not becloud the issue with reference to the psychological aspects of color in the responses.³

¹ A lack of color responses does not controvert this point. Color-determined concepts may not be given by subjects who respond quite readily to color naming in a non-Rorschach situation. This brings up the possibility of color blindness. It is wise for the tester to ascertain whether or not the testee has normal color vision. One clue would be the absence or distortion of color-determined concepts. It is suggested that a color blindness test be administered *after* the Rorschach has been completed and not before it. There is the possibility of influencing the testee with regard to color in the responses.

² Some of the affects of color phenomena form-level accuracy, consistency of responses, and other issues have been reported by Allen (1951b); Allen, Manne, and Stiff (1952); Allen, Stiff, and Rosenzweig (1953); Lazarus (1949); Loosli-Usteri (1950); Schachtel (1943); and Wallen (1948). These should be read.

³ Would it be mere rhetoric or idle speculation to indicate that this holds true for the c and C' determinants as well?
