

2 - Splitting the tractor between the engine and front axle

- a) Position the tractor onto the rails and rolling stands, as shown in the illustration above.

NOTE: It's recommended that the front weights are already mounted. They guarantee the front assy, that will be split from the tractor, is well balanced.

As a last resort (non-available weights), the rolling stands should be positioned under the support rear portion (tray), behind the axle. However, be really careful not to unbalance the assembly.

- b) In 4WD tractors, disconnect the drive shaft front end from the four wheel drive front axle.
To do so, release the clamp (1), slide the protection (2) rearwards and remove the split pin (3).

NOTE:

To have access to the split pin (3) of the front sleeve, it may be necessary to rotate the shaft. It can be done by running the engine in low gear. This is because the electro-hydraulic system for coupling the 4WD keeps the front axle engaged with the engine stopped. Refer to Section D of this Manual to know more about how this system works.
