▼ Part D - Capstone problem

A group of physics students hypothesize that for an experiment they are performing, the speed of an object sliding down an inclined plane will be given by the expression

$$v = \sqrt{2gd(\sin(\theta) - \mu_k \cos(\theta))}.$$

For their experiment, $d = 0.725$ meter, $\theta = 45.0^\circ$, $\mu_k = 0.120$, and $g = 9.80$ meter/second². Use your calculator to obtain the value that their hypothesis predicts for v .

with concrete observations and experiences that readers can directly relate to We then move on to the generalizations and more formal treatment of the topic Not only does this make the material more interesting and easier to understand but it is closer to the way physics is actually practiced
