cause trillions of dollars in property damage and loss. Such harmful species are understandably hated. However, the vast majority of the planet's millions of species are disliked simply because of how they look and act. This bias is endangering numerous species that play important roles in maintaining both the natural ecosystems and the human economies of the world. In *Defense of the World's Most Despised Species*, we examine the psychological motivations that lead people to make judgments about the attractiveness of species, noting the overwhelming importance of visual cues. It describes in considerable detail the physical and behavioral traits of species that lead us to love or hate them. Full color illustrations throughout present beautiful charming animals and plants, species that seem loathsome, behavior of people in relation to such divergent species, and their characteristics, and numerous explanatory diagrams of relevant biological and psychological phenomena. The aim of this book is to give readers insights into how we humans arrive at biased judgments and to promote the welfare of valuable, albeit sometimes unlovable animals and plants that consequently suffer from discrimination. Many of the ugliest, most disgusting and feared species, such as vultures, toads, hyenas, sharks, spiders, and even the vast majority of cockroaches, in reality are some of our most valuable friends. Features: Theme of the book: human preferences for and against species is novel, scarcely examined to date. Multidisciplinary analysis: especially psychology, biological conservation science, and ecology, as well as philosophy, agriculture, urban planning, human health, and law. Text is accessible, user friendly, concise, and well organized, making numerous complex topics comprehensible, readable, not only by specialists but also by students and the educated layperson. Includes over 2,000 high quality, entertaining and informative color figures.

Heartwarming Hans Rocha IJzerman, 2021-02-02. An illuminating investigation of core body temperature regulation and its powerful effect on human civilization. A hot cup of tea, coffee, or cocoa is calming and comforting, but how can holding a warm mug affect our emotions? In *Heartwarming*, social psychologist Hans Rocha IJzerman explores temperature through the long lens of evolution. Besides breathing, regulating body temperature is one of the most fundamental tasks for any animal. Like huddling penguins, we humans have long relied on one another to maintain our temperatures. Over millennia, this instinct for thermoregulation has shaped our lives and culture. Temperature contributed to our evolution: our upright walking, our loss of fur, and our big brains, and now continues to affect our lives in unexpected ways. And the link from a warm mug to our emotions is anything but straightforward. Studies have shown, for example, that a chilly deliberation room can predispose a jury to convict, and that a cold day can make us more likely to buy a house. Our mind-body connection works the other way too: thinking about friendly or caring people can make us feel warmer. Understanding how we subconsciously strive to keep our temperature in an optimal range can help us in our relationships, jobs, and even in the world of social media. As IJzerman illuminates how temperature affects human sociality, he examines fascinating new questions: How will climate change impact society? Why are some people chronically cold and others overheated? Can thermoregulation keep relationships closer, even across a distance? The answers offer new insights for all of us who want to better understand our bodies, our minds, and each other.

Heartwarming takes readers on an engaging journey through the world seen from the perspectives of coldness and warmth
