Handbook of Equality of Opportunity, 2024-07-12 This Handbook provides an authoritative exposition of equality of opportunity It presents the different concepts most commonly associated with equality of opportunity and discusses the many problems dominating the controversies on equality of opportunity at the theoretical policy or practical level The chapters give a concise exposition of the different conceptions and basic concepts of equal opportunities They clarify variables that are part of the algorithm of equal opportunities e g opportunity equality non discrimination fairness responsibility chance and choice excellence qualifications effort talent merit desert inequality and risk The idea of equality of opportunity has traditionally been associated with a set of largely unquestioned ideals and over the last 50 years it has been at the very centre of the major progressive social changes and firmly entrenched in political rhetoric Yet the idea of equality of opportunity is far from unquestionable or unproblematic as

the only solid assumption different conceptions have in common is their rejection of fixed social relations but not hierarchy itself Disagreements over the fundamental principles criticism over the inefficiency of policies aiming to ensure equal opportunities and objections to their unfairness all pose questions that current conceptions answer in different ways This Handbook examines a wide variety of questions about issues of motivation procedures genealogy taxonomy and compensation

Measuring the Global Burden of Disease Nir Eyal, Samia A. Hurst, Christopher J.L. Murray, S. Andrew Schroeder, Daniel Wikler, 2020-05-19 The Global Burden of Disease Study GBD is one of the largest scale research collaborations in global health distilling a wide range of health information to provide estimates and projections for more than 350 diseases injuries and risk factors in 195 countries Its results are a critical tool informing researchers policy makers and others working to promote health around the globe A study like the GBD is of course extremely complex from an empirical perspective But it also raises a large number of complex ethical and philosophical questions that have been explored in a series of collaborations over the past twenty years among epidemiologists philosophers economists and policy scholars The essays in this volume address issues of current and urgent concern to the GBD and other epidemiological studies including rival understandings of causation the aggregation of complex health data temporal discounting age weighting and the valuation of health states The volume concludes with a set of chapters discussing how epidemiological data should and should not be used Better appreciating the philosophical dimensions of a study like the GBD can make possible a more sophisticated interpretation of its results and it can improve epidemiological studies in the future so that they are better suited to produce results that can help us to improve global health
