Neurodevelopment and Intelligence: Impacts of Nutrition, Environmental Toxins, and Stress

(Volumes 1 and 2) Charles A. Lewis, MD MPH, 2022-03-01 This special edition of Neurodevelopment and Intelligence contains both Volumes One and Two. The set provides an understanding of neurodevelopmental risks during fetal and early life and of the things that can go awry that limit or hinder healthy brain development leading to a loss of intellectual abilities or causing disabilities such as autism spectrum disorder. It should be of interest to anyone interested in brain health, preventive medicine, pediatrics, public health, policy, present and prospective parents, and those planning on pregnancy and parturition. Herein Dr Lewis explains how people got smarter for more than a century and why the alternative title of the book is *Swimming in a Poisoned Pond: The Looming Demise of Cognitive and Mental Health in America*. How any healthy child can be a genius with advanced planning. All the nasty things in your home that cause brain damage. The disgusting things in your water that harm the brain. The prenatal vitamins that prevent autism. How ADHD is a lifestyle disease. The eight pillars of health and their effects on the brain. What men can do to sire smarter children. The environmental toxins that cause violent crime and suicide. How to make your home safe for your child's brain. The role of gut bacteria on the brain. How to make pregnancy safer for the fetal brain. Foods that improve brain function. Maternal life style factors that affect IQ. The seven pillars of health and their effects on the brain. What men can do to sire smarter children. How to make your home safe for your child's brain. The role of gut bacteria on the brain. The disruptive effects of sleep deprivation and sleep-disordered breathing on brain development and sleep hygiene for children. The effects of stress on the brain and its functioning. The harmful effects of poverty on the brain. How noise and noise pollution harm brain development. How good public policy can give us a brighter future. Foods that improve brain function and make us happy and engaged. The effects of Exercise and Environmental Enrichment. Kiss your genetic legacy goodbye. Why you will likely never be a grandparent if you don't already have children. How stress makes us stupid. Why people are getting dumber even though we have better medical care and more access to education. Are we already too dumb to save ourselves from our mistakes? How psychopathic corporations, stupidity, and structural racism raid America's wealth. The book is a serious scientific exploration of neurodevelopment on which policy and personal behavior changes can be based to improve health, happiness, and intellectual curiosity. Section 1 section lays out an description of the Intelligence Quotient (IQ) and why it can be used as a proxy for neurodevelopment. It explains IQ tests and other developmental scales, scoring, and some of their limitations. The high metabolic cost of a large brain and the survival advantage provided by epigenetic adaptation to downsize the brain to the current environmental conditions is described, explaining why a less costly and less intelligent brain are adaptive to leaner times. An estimate is made for the average human IQ in full health and nutrition, about two standard deviations above the current average, or an IQ of 130. A primer on inflammation is given. Section 2 discusses the impact of anemia and iron on brain development. Topics include Hookworm, malaria, and infections. Most of this section discusses iron deficiency, iron supplementation in pregnancy and infancy, and the role of other minerals and vitamins required for blood formation. Section 3 covers the role of iodine and

thyroid hormone on neurodevelopment The following chapters discuss thyroid hormone disruptors including fluoride and bromide organohalogens thyroid disrupting organic pollutants organophosphates and other biocides and foods and food additives that impact thyroid function Section 4 covers neurotoxic metals in the environment The neurotoxic metals that most commonly impact brain health are discussed including arsenic lead mercury manganese The impacts of cadmium and aluminum on fetal and infant health are reviewed Toxic metal exposure during development most commonly occurs from water contamination and Chapter 18 covers water filtration for removal of these toxins Section 5 discusses the role of toxic metals dietary factors and the role of the intestinal microbiome on the causation and exacerbation of autism spectrum disorder Evidence on the role of special diets for ASD is reviewed The timing of the development of ASD is discussed as it is essential to understanding which exposures are relevant and amenable to treatment Section 6 discussed the generation of air pollution from combustion of fuels and the adverse impacts of it on brain health Effects of Particulate matter PM on health Alzheimer s and Parkinson s disease are reviewed along with its effects on the premature birth of infants neurodevelopment IQ and autism Mitigation of risk is discussed Section 7 outlines maternal factors that impact neurodevelopment and intelligence The causes and effects of preterm birth and small for gestational age are explored with a particular focus on environmental influences Section 8 covers the effect of general health on neurodevelopment including the impact of diet on the intestinal microbiome exercise sleep deprivation sleep disordered breathing and explains the roll of lifestyle in ADHD Section 9 discusses the effects of psychosocial stress on neurodevelopment and intellectual performance and discusses the epigenetic effects of stress on brain development and behavior The role of having a supportive social environment a stimulating environment and education on brain development IQ an health are discussed The effects of prenatal stress on the brain are reviewed Other topics include the effect of stress and telomere length the effects of poverty or domestic violence on IQ score and the effects of stress on the hypothalamic pituitary adrenal axis and on the gut The effects of noise on hearing academic performance and sleep are reviewed The need to confront endemic stress as a societal norm is discussed

Molecular Basis and Emerging Strategies for Anti-aging Interventions Syed Ibrahim Rizvi,Ufuk Çakatay,2018-11-02 This book describes the nature of aging age related disorders and the molecular principles of emerging strategies for anti aging interventions while also discussing the discovery of targets for geroprotective drugs Although significant medical advances in the treatment and eradication of life threatening conditions such as cardiovascular and infectious disease have been made over the past five decades the prevalence of age related disorders still remains high in older populations Intervening into aging is the next frontier in contemporary medicine and will be of increasing importance over time as other sources of poor health are combated more and more successfully Given the universal interest in anti aging strategies the book will appeal to a very broad audience It addresses a diverse range of anti aging interventions including stem cells autophagy senolytics anti inflammatory methods and telomerase induction that will be of interest to scientists and researchers from various disciplines

Nutritional Cognitive Neuroscience Research at the Crossroads of Nutrition, Psychology, and Neuroscience

Aron K. Barbey, Elizabeth J. Johnson, Margaret Joy Dauncey, 2019-01-23 Nutritional Cognitive Neuroscience is an emerging interdisciplinary field of research that seeks to understand nutrition's impact on human cognition and brain health across the life span. Research in this burgeoning field demonstrates that many aspects of nutrition from entire diets to specific nutrients affect brain structure and function and therefore have profound implications for understanding the nature of psychological health, aging, and disease. The aim of this Research Topic in *Frontiers in Aging Neuroscience* is to examine recent empirical and theoretical contributions from Nutritional Cognitive Neuroscience with an emphasis on the following primary areas of inquiry: Nutrition and Brain Health. An enduring aim of research in the nutritional sciences is to discover specific nutrients and dietary patterns that enhance cognitive function and brain health in the elderly. Although an abundance of evidence supports a single or a few nutrients for the promotion of cognitive performance and brain health, clinical trials using nutritional supplementation have been predominately unsuccessful. Further research is therefore needed to better characterize the contributions of specific nutrients and nutrient combinations to cognitive performance and brain health. Moderators of Nutrition's Impact on the Brain. A second major area of research in Nutritional Cognitive Neuroscience investigates the mechanisms that underlie the effects of nutrition on brain health at the cellular, molecular, and circuit levels. Accumulating evidence indicates that the effects of nutrition on brain health are complex and multifactorial, reflecting the influence of particular nutrient combinations on specific brain networks and taking into account several moderating factors. Considerably more research is needed to elucidate the complex interactions between nutrition and known moderating variables including age, nutritional status, genes, environment, and lifestyle in determining nutrition's impact on cognitive function and brain health. Personalized Nutrition. Research at the frontiers of Nutritional Cognitive Neuroscience establishes a personalized approach to nutritional intervention that takes into account individual variability in nutritional status, brain health, genes, environment, and lifestyle. The goal of personalized nutrition is to enhance the precision of nutritional intervention and to enable novel applications to psychological health, aging, and disease.
